AN INTRODUCTION TO ACADEMICS
AT DARTMOUTH COLLEGE
To fully experience the academic opportunities at Dartmouth, it is important to know the academic benchmarks that are required of you and how to navigate the curriculum. Explore, Engage, Excel is a critical first step in your journey.

Exploration will be a recurrent theme throughout this guide and throughout your relationships with advisors and mentors. The Undergraduate Deans Office hopes that you will use this guide for the entirety of your first year of study; the advising it offers and the description of courses will remain invaluable.

We encourage you to purposefully engage with your advisors. They will begin to help you explore the curriculum by asking questions, such as:

- Why are you interested in that course?
- Why are you not interested in this other course?
- Where do you see opportunities to explore your creative side?
- What course would allow you to experience a previously unexplored academic discipline?

Don’t worry if you don’t know or currently have all the answers to these and other questions. There are tremendous resources at Dartmouth to support and encourage your exploration and discovery. The Undergraduate Deans Office (see column to the right), in conjunction with your faculty advisor, will offer assistance and guidance at every step along the way.

There are questions and prompts designed for you throughout this document; we invite you to fully engage with them: ask yourself questions, push yourself to reflect, look at the course offerings with a thoughtful and inquisitive eye, and allow yourself to be energized with possibilities.

We know that many transitions bring uncertainty and transitioning from secondary school to college is no exception. Allow EXPLORE, ENGAGE, EXCEL to serve as your first resource, and know that there are many other resources available to you this summer and when you begin your academic career at Dartmouth. Being honest, realistic, and open about any uncertainty and apprehension you are experiencing will enable you to best access these sources of support and potentially develop strategies before your first term at Dartmouth begins.

Let us now introduce you to YOUR ADVISING NETWORK. As you begin to work with your advising network, it is important that you understand what advising can offer, who will form your advising team, and how you can best utilize these important resources.

With a warm welcome,
The Undergraduate Deans Office

What exactly is advising?
Advising is a process by which faculty, staff, and peers empower you to think and reflect deeply about what it is you want out of your Dartmouth experience. Your advisors will ask you to revisit and clarify your expectations, especially as you come to understand yourself—and Dartmouth—differently. Throughout the advising process, you will be encouraged to find balance within the choices that honor both your narrow academic interests and broader learning opportunities.

We will challenge you to explore and expand your horizons at every stage of your undergraduate education. Additionally, you are expected to take increasing responsibility for your advising relationships. First-year advising supports your transition from high school to college, encourages you to explore the opportunities and resources at Dartmouth, and assists you in making informed academic choices. As you read this guide and spend time with us during upcoming online advising chats or when reading our advising emails, you begin your own advising experience.

Who are the advisors?
Dartmouth faculty, administrators, and staff are all involved in advising students—in group settings, during programs and events, and, especially, through one-on-one appointments, open hours, and office hours. Advisors look forward to getting to know you and understanding your aspirations.

Undergraduate Deans
Undergraduate Deans Office (UDO)
https://students.dartmouth.edu/undergraduate-deans/
- Offer advising and assistance on academic, personal, and social matters throughout your entire time at Dartmouth.
- Help students elect courses and explore the curriculum, academic requirements, educational goals, summer opportunities, career aspirations, and extra-curricular interests.
- Act as both a sounding board for students’ ideas and a link between students and resources.
- Strive to provide holistic advising through close collaboration with other offices in Student Academic Support Services.

Together, our initiatives are directed toward anchoring students in the intellectual life of the College, supporting meaningful and inclusive interaction across difference, and facilitating engagement and personal development.

Additional Resources
- Student Accessibility Services (SAS) https://students.dartmouth.edu/student-accessibility/
- Academic Skills Center (ASC) https://students.dartmouth.edu/academic-skills/
- Health Professions Program (HPP) https://www.dartmouth.edu/prehealth/
- Center for Professional Development (CPD) https://sites.dartmouth.edu/cpd/

This guide may require adjustments as circumstances surrounding COVID-19 evolve and as college policy and timelines change. Please note that course listings are subject to change. We strongly encourage you to visit department websites and course timetables for updated information.
Accessing Advising

**Faculty**
- Each first-year student is assigned a faculty academic advisor.
- You will meet with your faculty advisor to elect courses and discuss schedules and issues of an academic nature.
- When you declare a major, a major advisor from that academic department will help you shape your course of study within that major.

**Peer Advisors**
Peer advisors include Undergraduate Advisors (UGAs), tutors, Orientation Leaders (OLs), Pre-Health Peer Mentors, and others. As with other sources of advising, it will be important for you to evaluate your peer advisors’ advice alongside your goals, aspirations, and values, and in the context of the advising you receive from your faculty advisor, undergraduate dean, and pre-major advisor.

**Other Faculty, Administrators, and Peers**
- Students are encouraged to assume increasing responsibility for cultivating advising relationships during their time at Dartmouth.
- This includes expanding your network of advisors, proactively seeking desired resources, considering your own needs and goals, and balancing multiple sources of advising.

**How do I take full advantage of advising?**
You have a role to play in making your advising relationships successful. Academic advising works best when a student takes the initiative to seek guidance and maintains ongoing advising relationships. To make the best possible decisions for your academic career, you should be proactive, think critically about the information you receive, and invest time in meeting with your advisors regularly. Your advisors want to help you make sense of all that Dartmouth has to offer but need your full engagement in the process. This guide is designed to provide you with the information you need right now and throughout the summer. If you feel overwhelmed by the process or the choices ahead of you, come back to this guide and—in particular—the timeline to the right.

Remember: When you invest time and energy in developing meaningful advising relationships, you position yourself to make highly informed choices while at Dartmouth, and to develop valuable relationships with advisors that may enrich your life for years to come.

It’s time to begin! This guide is the first of several interactions we will have with you this summer. Watch for advising emails about exploring the curriculum, preparing for the meeting with your faculty advisor, and course election.

We can’t wait to meet you, support your exploration, and watch you grow and learn as a member of the Dartmouth community.

---

**COURSE EXPLORATION AND TRANSITION TO COLLEGE TIMELINE**

**THIS PART OF YOUR JOURNEY IS ALL ABOUT EXPLORATION.**

**NOW**
- Explore this guide from cover to cover immediately upon receipt.
- Begin the worksheet on page 40.
- Read emails from New Student Orientation (NSO) and the Undergraduate Deans Office.

**MID-SUMMER**
- Deeply explore academic department and program websites – dig around!
- Spend time on the New Student Orientation (NSO) Canvas site with the On Your Own modules.

**YOU ARE EXPECTED TO ENGAGE IN NEW STUDENT ORIENTATION WITH CLARITY AND PURPOSE.**

**LATE SUMMER**
- Participate in online advising chats (registration links will arrive by email from the Undergraduate Deans Office).
- Complete the Advising Questionnaire in DartHub when it becomes available on August 31.
- You are not expected to begin your academic journey at Dartmouth with all your courses chosen. Don’t rush the decision-making process. Take your time!
- Continue to engage with the New Student Orientation (NSO) Canvas site.
- Watch for information about Dartmouth generated Placement Exams from New Student Orientation (NSO).

**NEW STUDENT ORIENTATION**
- Engage with academic and curricular programming, which will inform course election.
- You will continue to explore the interests you’ve discovered in this guide by:
  - Talking with your faculty advisor and undergraduate dean.
  - Participating in academic and curricular programming.
  - Visiting as many academic department and program Open Houses as possible.
- Complete the Advising Questionnaire in DartHub by Thursday, September 8.

**COURSE ELECTION**
- All students elect courses on Friday, September 9 during NSO.
- Your Undergraduate Dean will email essential and timely information.
- You will meet with your Faculty Advisor as part of course election.
- The Undergraduate Deans will also be available for course election advising.

**CLASSES BEGIN**

**YOUR TO DO LIST:**
1. Grab whatever you need to take notes and to support your exploration.
2. Find a comfortable place where you can concentrate, then take your time to read this guide.
3. Imagine, be curious, don’t limit yourself, and EXPLORE.
4. Utilize the worksheet on pages 40-41 to organize your thoughts and discoveries.

---

**Accessing Advising**

**Faculty**
- Each first-year student is assigned a faculty academic advisor.
- You will meet with your faculty advisor to elect courses and discuss schedules and issues of an academic nature.
- When you declare a major, a major advisor from that academic department will help you shape your course of study within that major.

**Peer Advisors**
Peer advisors include Undergraduate Advisors (UGAs), tutors, Orientation Leaders (OLs), Pre-Health Peer Mentors, and others. As with other sources of advising, it will be important for you to evaluate your peer advisors’ advice alongside your goals, aspirations, and values, and in the context of the advising you receive from your faculty advisor, undergraduate dean, and pre-major advisor.

**Other Faculty, Administrators, and Peers**
- Students are encouraged to assume increasing responsibility for cultivating advising relationships during their time at Dartmouth.
- This includes expanding your network of advisors, proactively seeking desired resources, considering your own needs and goals, and balancing multiple sources of advising.

How do I take full advantage of advising?
You have a role to play in making your advising relationships successful. Academic advising works best when a student takes the initiative to seek guidance and maintains ongoing advising relationships. To make the best possible decisions for your academic career, you should be proactive, think critically about the information you receive, and invest time in meeting with your advisors regularly. Your advisors want to help you make sense of all that Dartmouth has to offer but need your full engagement in the process. This guide is designed to provide you with the information you need right now and throughout the summer. If you feel overwhelmed by the process or the choices ahead of you, come back to this guide and—in particular—the timeline to the right.

Remember: When you invest time and energy in developing meaningful advising relationships, you position yourself to make highly informed choices while at Dartmouth, and to develop valuable relationships with advisors that may enrich your life for years to come.

It’s time to begin! This guide is the first of several interactions we will have with you this summer. Watch for advising emails about exploring the curriculum, preparing for the meeting with your faculty advisor, and course election.

We can’t wait to meet you, support your exploration, and watch you grow and learn as a member of the Dartmouth community.
Dartmouth College educates the most promising students and prepares them for a lifetime of learning and of responsible leadership, through a faculty dedicated to teaching and the creation of knowledge.

Dartmouth’s current curriculum was established by the faculty out of the desire to reflect contemporary changes in the many areas of human knowledge and to prepare students for citizenship in a complex world. In the Recommended Courses for First-Year Students section of this guide, we have included descriptions of those courses most frequently taken by first-year students in the fall term.

A complete inventory of course offerings and academic regulations may be found in the College bulletin entitled Organization, Regulations, and Courses (ORC). It is published each fall and is available online at https://dartmouth.smartcatalogiq.com/en/current/orc. First-year students elect fall term courses during New Student Orientation. To assist in electing courses, students meet with a faculty advisor; undergraduate deans, department and program chairs, and individual professors are also available for consultation. Important academic and curricular information in the following sections will guide you as you make your preliminary plans.

Academic Curriculum

THE IMPORTANCE OF ACADEMIC INTEGRITY

The integrity that you bring to your academic work contributes to your own learning, protects against one person taking unfair advantage over other students, promotes trust among students and with your faculty, and appropriately credits the work of scholars who have paved the way for you. In general, the Academic Honor Principle prohibits: plagiarism; giving or receiving assistance on examinations or quizzes; submitting the same work in more than one course; and unauthorized collaboration. A student who violates the Academic Honor Principle, regardless of their intent, should expect to be suspended from the College for a period of time.

You will be asked as part of the pre-arrival process to review a document titled Sources and Citations at Dartmouth College, which provides in-depth information about the Academic Honor Principle (http://writing-speech.dartmouth.edu/learning/materials/sources-and-citations-dartmouth). In each of your courses, we encourage you to ask about the Honor Principle if your professor has not already introduced the conversation.

REQUIREMENTS FOR THE BACHELOR’S DEGREE

Students should refer to the Organization, Regulations and Courses catalog, known as the ORC/Catalog, for a full description of all the requirements for the degree. In general, enrolled students take three courses per term for twelve terms. To earn the bachelor’s degree, a student completes a major, and receives credit for 35 courses, no more than eight of which may be passed with the grade of D. Students are also required to complete the first-year writing requirement, a first-year seminar, a foreign language requirement, distributive requirements that reflect the breadth of a liberal arts education, three world culture courses, and the Physical Education program. It is the student’s responsibility to ensure that they meet all requirements. DartWorks Degree Audit, an individualized online degree audit tool, assists students in keeping track of their progress towards a degree.

LIBERAL ARTS CURRICULUM

Dartmouth’s liberal arts curriculum lets you explore big ideas and pursue your particular passions. It is about BREADTH: a liberally educated person is one who has been exposed to a wide range of fields and insights. It also features DEPTH: students are required to complete some concentrated course of study in which they display deep knowledge and mastery. At Dartmouth, you will engage with culture, creativity, compassion, and critical thinking as you explore the many courses available to you.

Through a liberal arts curriculum, we hope Dartmouth’s students begin a lifetime quest—an intellectual journey—that prepares them for the challenges and opportunities of the twenty-first century.

FIRST-YEAR WRITING REQUIREMENT

All first-year students are required to fulfill Dartmouth’s first-year writing requirement. Through the first-year writing courses, the College offers entering students a valuable opportunity to develop the thinking and writing abilities that characterize intellectual work in the academy and in educated public discourse.

The first-year writing requirement at Dartmouth is satisfied by taking Writing 5 or its approved equivalents. Approved equivalents include: Writing 2-3 and Humanities 1.

Writing 5 introduces Dartmouth students to critical writing and treats writing not primarily as an instrument for communication but as a practice of thinking, by means of which ideas are discovered, examined, compared, evaluated, refined, and promoted. Each section of Writing 5 organizes its writing assignments around challenging readings chosen by the instructor. The texts for the class also include student writing.

Writing 2-3 is a two-term course that provides more intensive guidance through the read-
ing, writing, and research processes, including individual support from teaching assistants and a culminating research project. Writing 2-3 is taken in place of Writing 5. Writing 2-3 is offered in fall and winter terms only.

FIRST-YEAR SEMINAR REQUIREMENT
The First-Year seminar requirement is satisfied by taking a First-Year Seminar or Humanities 2. First-Year Seminars offer every first-year student an opportunity to participate in a course structured around intensive writing, independent research, small group discussion, and reading across the disciplines.

You should keep in mind three scheduling guidelines:
1) Successful completion of the first-year writing requirement is a prerequisite for enrollment in a First-Year Seminar (or Humanities 2).
2) The First-Year Seminar (or Humanities 2) must be taken during the first year, in the term immediately following completion of the writing requirement.
3) A student is not eligible to take part in an off-campus program until the First-Year Seminar (or Humanities 2) is completed.

For more information about the first-year writing and first-year seminar requirements and placement and enrollment policies for Writing 2-3, Writing 5, and First-Year Seminar, visit the Writing Program website: https://writing-speech.dartmouth.edu/curriculum/directed-self-placement-and-enrollment-policies.

LANGUAGE REQUIREMENT
Beginning with the entering class of 2026 and beyond, all students must satisfy the Language Requirement with coursework taken at Dartmouth. For more information, please see the Language Requirement webpage at https://dargo.org/lang-req. This information can also be found in the Language Requirement Chart on page 39.

DISTRIBUTIVE REQUIREMENT ("Dist")
Dartmouth's requirement of Distributive courses allows you to explore broadly several fields and gain new perspectives. Both the Distributive Requirement and the World Culture Requirement allow for discovery and encourage exposure to new interests. Each student must take courses in each of the following areas:
• One in Arts (ART)
• One in Literature (LIT)
• One in Systems and Traditions of Thought, Meaning, and Value (TMV)
• One in International or Comparative Study (INT)
• Two in Social Analysis (SOC)
• One in Quantitative and Deductive Sciences (QDS)
• Two in the Natural Sciences; without/with laboratory (SCI/SLA)*
• One in Technology or Applied Science; without/with laboratory (TAS/TLA)*

* One of the courses taken in either SCI/SLA or TAS/TLA must have a laboratory, experimental, or field component.

Introductory language courses, first-year seminars, and independent studies do not fulfill Distributive or World Culture Requirements.

WORLD CULTURE REQUIREMENT ("WCult")
As with “Distributives,” the World Culture Requirement supports the belief that a liberally educated person is one who has been exposed to a wide range of fields and insights. Each student must take at least one course in each of the following cultural areas:
1) Western Culture (W)
2) Non-Western Culture (NW)
3) Culture and Identity (CI)

Undergraduate courses other than Writing 2, 3, and 5, and language courses used to fulfill the foreign language requirement may potentially satisfy a Distributive Requirement. Such a course may also satisfy one of the World Culture Requirements. For example, a course in 19th-century British fiction might satisfy both the literature requirement under the Distributive category and the western culture requirement under World Culture. It is thus possible, by careful selection of courses which satisfy requirements in multiple categories, to complete both the Distributive and World Culture Requirements with ten courses. These may also overlap with major requirements. The online course catalog (ORC/Catalog) helps students to plan, and the termly Timetable of Class Meetings provides up-to-date information as to which courses are being offered and which satisfy Distributive and World Culture categories. Distributive and World Culture Requirements cannot be fulfilled with pre-matriculation credit. Courses satisfying Distributive and World Culture Requirements must be passed with a regular letter grade.

MAJOR
A major assures that when you graduate from Dartmouth you will have gained mastery in the method and substance of a single area of academic inquiry. Ideally, the area of major study provides a path for intellectual exploration and the satisfaction of becoming proficient at a high level in your area of interest.

A student must successfully complete a major program, which usually consists of eight to ten courses in the major subject in addition to those courses prerequisite to the major, and other requirements specified by the department or program. Students may also declare modified or special majors that involve more than one academic department or program. Students must declare a major by the end of the student’s fifth term in residence, or immediately thereafter, depending upon a student’s enrollment pattern (D-Plan).

First-year students thinking of majoring in biology, chemistry, earth sciences, engineering sciences, mathematics, or physics are encouraged to elect Math 3 or the sequence of Math 1 and Math 3, starting in their first term.

FIRST-YEAR RESIDENCY REQUIREMENT
All first-year students are required to be in residence for all three terms of the first year, after which they may choose leave terms or apply for...
off-campus programs as part of their enrollment pattern (D-Plan). Shortly after the start of the spring term every first-year student must submit their enrollment pattern (D-Plan) for the remaining nine terms. The pattern must be within a period of four academic years (within fifteen terms after matriculation) and designed to meet degree requirements. After the first year, students may substitute an Off-Campus Program term (O) for one or more of the remaining nine terms.

ENROLLMENT PATTERN: The "D-Plan"
Dartmouth’s academic calendar consists of four terms that roughly correspond with the seasons. A year-round academic calendar challenges you to define personal educational goals and provides considerable opportunity to shape your educational program. Credit for 35 courses is model is strong faculty involvement that leads to considerable opportunity to shape your educational program. Credit for 35 courses is the development of meaningful relationships and mentoring between students and program directors. Typically, over fifty percent of Dartmouth undergraduate students participate in one or more Language Study Abroad program (LSA), Foreign Study Program (FSP), Domestic Study Program (DSP), and/or Exchange programs before they graduate.

Students returning to campus after participating in these programs often speak of experiences that were meaningful and transformative and that fostered significant learning and growth, both academic and personal.

The College normally offers over sixty different faculty-directed and exchange program options. For more information on foreign and domestic study programs and exchanges, please visit the Frank J. Guarini Institute for International Education website at https://guarini.dartmouth.edu/

CO-CURRICULAR OPPORTUNITIES
Students are encouraged to take advantage of Dartmouth’s rich variety of co-curricular opportunities.

Engaging in these opportunities can provide a sense of community and continuity and allow you to integrate your learning inside and outside of the classroom.

- House Communities increase student access to faculty in residential spaces and create opportunities for enhanced social ties and shared experiences in the residential system. Every student has a house membership, regardless of where you live. https://students.dartmouth.edu/residential-life/house-communities/about-house-system.

- The Life and Community tab on Dartmouth’s homepage describes many other opportunities, including the Collis Center for Student Involvement, Student Wellness Center, Office of Pluralism and Leadership, and the Dartmouth Outing Club. https://home.dartmouth.edu/life-community.

D-Plan Requirements
- Your D-Plan will consist of twelve enrolled/residence terms and three leave terms.
- You may have, at most, seven fall or spring residence terms in total. Therefore, your initial plan will include at least one leave term in the fall or spring of sophomore, junior, or senior year.
- You may, at a later time, choose to take an Off-Campus Program term, in place of one or more of your 12 residence terms, which does not count toward one of the seven allowed fall/spring residence terms.
- You are expected to be in residence (R) during the summer term that immediately follows your sophomore year. You may substitute another summer term (or Off-Campus summer program) in satisfaction of the sophomore summer residence requirement.
- You are expected to be in residence for at least two terms of your senior year.

GRADE REPORTS
In most courses letter grades are assigned on a 4.0 scale, with an A equal to 4.0, indicating excellence and F equal to 0 or failure (there is no grade of E). You are expected to be in residence (R) during the summer term that immediately follows your sophomore year. You may substitute another summer term (or Off-Campus summer program) in satisfaction of the sophomore summer residence requirement.

Student Records Policy
The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. Please find more information in the FERPA section of the Student Handbook. https://www.dartmouth.edu/student-handbook/.

Dartmouth College values the privacy of its students and seeks to preserve the confidentiality of their education records. The college complies fully with the provisions of the Family Educational Rights and Privacy Act of 1974 (FERPA), as amended, a federal law that permits students to review their education records and creates certain obligations of the college with respect to protected education records.

The only records the Undergraduate Deans Office keep on file pertain to a student’s admissions materials at the time of application and a student’s educational record. To review what materials we maintain, please schedule a time to meet with your undergraduate dean.

Academic Opportunities

OFF-CAMPUS PROGRAMS
The Frank J. Guarini Institute for International Education

(603) 646-1202
https://guarini.dartmouth.edu/

Off-campus programs are an important extension of the regular Dartmouth curriculum, offering undergraduate students a rigorous off-campus living and learning experience in diverse global locations and cultural contexts. These term-length experiences promote disciplinary and interdisciplinary scholarship, boost foreign language acquisition, enable interaction with diverse natural environments, and offer opportunities to develop valuable and transferrable intercultural competencies. A distinguishing feature of Dartmouth’s cohort model is strong faculty involvement that leads to the development of meaningful relationships and mentoring between students and program directors. Typically, over fifty percent of Dartmouth undergraduate students participate in one or more Language Study Abroad program (LSA), Foreign Study Program (FSP), Domestic Study Program (DSP), and/or Exchange programs before they graduate.

Students returning to campus after participating in these programs often speak of experiences that were meaningful and transformative and that fostered significant learning and growth, both academic and personal.

The College normally offers over sixty different faculty-directed and exchange program options. For more information on foreign and domestic study programs and exchanges, please visit the Frank J. Guarini Institute for International Education website at https://guarini.dartmouth.edu/

CO-CURRICULAR OPPORTUNITIES
Students are encouraged to take advantage of Dartmouth’s rich variety of co-curricular opportunities.

Engaging in these opportunities can provide a sense of community and continuity and allow you to integrate your learning inside and outside of the classroom.

- House Communities increase student access to faculty in residential spaces and create opportunities for enhanced social ties and shared experiences in the residential system. This section provides a brief introduction to Dartmouth’s academic departments and programs and recommended courses for first-year students.

The following pages include descriptions for selected courses that allow you to explore each academic department and program.

Course Designations

• Courses are offered during different terms. Please visit department websites for information regarding when courses might be offered.
• Distributive and World Culture codes assigned to each course (see page five for more information) are indicated after the course descriptions.
• Each academic department numbers courses differently. All courses listed in this guide are recommended for first-year students. Pick the courses that interest you, regardless of the number.

Please note: Course listings are subject to change; you need to be proactive in regularly consulting department and program websites for updated information.

The courses in this section do not represent an exhaustive list; please make sure to explore department and program websites, especially if you know that you are interested in that particular discipline.

As you immerse yourself in these intriguing course descriptions, please keep the following “big ideas” in mind:

• You are embarking on a liberal arts education – one that offers a broad understanding of the world with mastery of at least one field; the capacity to think critically and creatively; powerful communication skills; an ease at working in teams; scientific literacy; the ability to engage the arts and humanities; and the development of principled leadership skills.
• Take full advantage of this curriculum, from the very beginning. Let this first exploration of course offerings be the start of the “breadth” of your liberal arts education.
• There is no wrong class – each class that you take will provide an opportunity for growth, exploration, and increased knowledge.
• Expect to be challenged personally, intellectually, and socially. And reach out for support from the many resources on campus, especially the ones introduced in this guide.
• Your job this summer is to explore, reflect, and envision. We hope that you end this period of reflection with confidence and excitement about your transition to Dartmouth.
• We’ll be in touch at several points during the next few months with further instruction, inspiration, and important information. Until then … we wish you well!

African and African American Studies (AAAS)
The African and African American Studies Program at Dartmouth College originated in 1969, making it one of the oldest programs of its kind in the nation. Utilizing innovative theoretical and empirical investigations, students explore questions and issues that shape the historical, social, political, and cultural dimensions of African, the African Diasporic, and African American worlds and experiences within a global context. We have core faculty based in AAAS as well as affiliated faculty situated in programs and departments across campus. The multidisciplinary curriculum in AAAS offers a major, minor, and an honors program for outstanding students.

The following courses are recommended for first-year students (AAAS):
09. Introduction to AAAS Diaspora Studies
10. Introduction to African American Studies
11. Introduction to African Studies
12. Race and Slavery in US History
14. Pre-Colonial African History
15. History of Africa since 1800
19. Africa and the World
22. Religion and the Civil Rights Movement
22.10 African American Religion and Culture in Jim Crow America
27. Transformative Spiritual Journeys
63. Race Matters: “Race” Made to Matter
66. Black Migration – Black Immigration

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:

09. Introduction to AAAS Diaspora Studies
A comparative and historical team-taught course composed of three units: Africa, the Caribbean, and the United States. In addition to literary and social sciences texts, the course will consider music, the visual arts, science, diaspora theory, and research strategies. Topics include the coloniality of modernity; religio-racial self-fashioning; Diaspora identity and identification; African diaspora gender and sexuality; cuisine; pathogenicity, disease and chemical catastrophes.

10. Introduction to African American Studies
A multidisciplinary investigation into the lives and cultures of people of African descent in the Americas. Topics include: the African background, religion and the black church, popular culture, slavery and resistance, morality and literacy, the civil rights movement, black nationalism, theories of race and race relations.

12. Race and Slavery in US History
This course deals with the African heritage, origins of white racial attitudes toward blacks, the slave system in colonial and antebellum America, and free Black society in North America. Specific emphasis on the Afro-American experience and the relationship between blacks and whites in early American society.
19. Africa and the World
Focus on links between Africa and other parts of the world, in particular Europe and Asia. Readings, lectures, and discussions will address travel and migration, economics and trade, identity formation, empire, and cultural production. Rather than viewing Africa as separate from global processes, the course will address historical phenomena across oceans, cultures, and languages to demonstrate both the diversity of experiences and long-term global connections among disparate parts of the world.

22.10 African American Religion and Culture in Jim Crow America
Jim Crow segregation in the US compelled many African American men and women to use their bodies—their hands, feet, and voices—to create sacred scenes, sounds, and spaces to articulate their existence in America. This seminar focuses on religious production to explore African American culture in the post-Civil War era. Students will analyze a variety of sources, including music, visual art, film, religious architecture, sermons, food, theater, photography, and news media.

27. Transformative Spiritual Journeys
Presents African Americans who have created religious and spiritual lives amid the variety of possibilities for religious belonging in the second half of the twentieth century and the early twenty-first century. We will study the writings of theologians, religious laity, spiritual gurus, hip hop philosophers, LGBT clergy, religious minorities, and scholars of religion as foundational for considering contemporary religious authority through popular and/or institutional forms of religious leadership. Themes of spiritual formation and religious belonging as a process—healing, self-making, writing, growing up, renouncing, dreaming, and liberating—characterize the religious journeys of African American writers, thinkers, and leaders whose works we will examine. We will incorporate relevant audiovisual religious media, online exhibits, documentary films, recorded sermons, tv series, performance art, and music.

Anthropology (ANTH)
Anthropology seeks to understand what makes human beings a single species and why that unity finds expression in such culturally diverse ways. Anthropology ranges from scientific inquiry into human biological and cultural evolution to human biological and cultural diversity. This course explores the unity and diversity of humankind by examining our evolution as a single biological species that nonetheless depends for its survival on learned—and therefore varied as well as variable—patterns of cultural adaptation. Lectures and readings address the relationship between the material conditions of our existence, our unique human capacity for creative thought and action, and changes in the size and scale of human societies. Dist: INT or SOC, WCult: CI.

03. Introduction to Cultural Anthropology
Cultural anthropology is the study of human ways of life in the broadest possible comparative perspective. Cultural anthropologists are interested in all types of societies, from hunting and gathering bands to modern industrial states. The aim of cultural anthropology is to document the full range of human cultural adaptations and achievements and to discern in this great diversity the underlying covariations among and changes in human ecology, institutions and ideologies. Dist: INT or SOC, WCult: NW.

05. Reconstructing the Past: Introduction to Archaeology
Anthropological archaeology makes a unique contribution to understanding the human past. This course introduces the key concepts, methods and techniques used by modern archaeologists to interpret the past. Students will become better acquainted with archaeological methods through small projects and the discussion of case studies.

06. Introduction to Biological Anthropology
The major themes of biological anthropology will be introduced; these include the evolution of the primates, the evolution of the human species, and the diversification and adaptation of modern human populations. Emphasis will be given to the underlying evolutionary framework the complex interaction between human biological and cultural existences and the environment. (BIOL) Dist: SCI.

09. Language and Culture
This course will introduce students to the study of human language as a species-specific endowment of humankind. In this investigation we will examine such issues as: 1) the relationship between language use (e.g. metaphoric creativity) and cultural values, 2) the relationships between language diversity and ethnic, political, economic stratification, 3) language use and the communicating of individual identity, thoughts, and intentions in face-to-face interaction, 4) the cultural patterning of speech behavior, and 5) whether or not the structure of specific languages affects the characteristics of culture, cognition, and thought in specific ways. Dist: SOC.

08. The Rise and Fall of Prehistoric Civilizations
One of the most intriguing questions in the study of human societies is the origins of cities and states or the transformation from small kinship-based societies to large societies that are internally differentiated on the basis of wealth, political power, and economic specialization. Most of our knowledge of early civilizations comes from archaeology. This course examines the explanations proposed by archaeologists for the development of the first cities and state societies through a comparative study of early civilizations in both the Old World and the Americas. Dist: INT or SOC, WCult: NW.

13. Who Owns the Past?
Modern archaeology grew out of antiquarianism, imperialism, and the attempts of early collectors and scholars to look to the past for aesthetics, to construct identities, and to satisfy their curiosity. This course examines how these legacies influence contemporary archaeology, museum practices, and policies to manage cultural heritage. The central question will be explored utilizing the perspectives of the relevant actors: archaeologists, collectors, museums, developers, descendant communities, national and local governments, and the tourism industry.
Recommended Courses for First-Year Students

Arabic
(See program description under Middle Eastern Studies.)

Art History (ARTH)
The areas of interest represented among the art history faculty are broad, spanning many centuries of European, American, African and Asian art. On-site study is available to students who enroll in the Foreign Study Program in Rome, Italy, offered annually in the spring term. The Department of Art History provides wide-ranging courses and disciplinary training to majors; offers gateway courses that develop visual literacy and art-historical awareness in the college at large; and aims to promote broad understanding of the visual arts in the contemporary world.

Students majoring in art history are well-prepared for graduate study, and an advanced degree in art history can lead to careers in scholarly research and teaching, museum work, commercial art galleries, auction houses, arts administration, and public and private art foundations. In addition, many art history students have followed their undergraduate studies with professional training in law, business, and medicine. Most art history courses carry no prerequisites and are open to first-year students. Questions about specific courses should be directed to the appropriate faculty member.

ADVANCED PLACEMENT
No pre-matriculation credit or exemption is given for courses in art history.

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:
ARTH 1. Bodies and Buildings: Introduction to the History of Art in the Ancient World and the Middle Ages
This course studies basic problems and new directions in the understanding of architecture, sculpture, and painting in Europe and the Near East from the earliest times to the end of the Middle Ages. It introduces students to the language of art criticism and method, as well as to the relationships of the arts to each other and to their historical contexts. Special attention is given to the human body and visual narrative. Dist: ART; WCult: W.

Asian Societies, Cultures, and Languages (ASCL)
Asian cultures have long and productive traditions in science and technology, arts and literature, political philosophy, business and economics, religious beliefs and practices—traditions that have become dominant forces in the contemporary world. A basic knowledge of Asia is vital to Dartmouth students because Asia figures prominently in issues related to international law and human rights, the environment and climate change, economic development and migration, media and the arts, and technological innovation. ASCL provides courses that present students with a range of methodologies used by Asia specialists from various disciplines. ASCL offers a flexible major that allows students to focus their study on a specific country or region of Asia. Students can also adopt a discipline-specific approach to Asia and focus on Asian literatures, languages, religions, histories, or visual cultures.

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:
CHIN 1. First Year Courses in Chinese
JAPN 1. First Year Courses in Japanese
ASCL 10.01 Urban Asia
ASCL 10.01 Introduction to Chinese Culture
ASCL 10.02 Introduction to Korean Culture
ASCL 10.03 Introduction to Japanese Culture

CHIN 1. First Year Course in Chinese
An introduction to spoken and written Modern Standard Chinese. Conversational drill and comprehension exercises in classroom and laboratory provide practice in pronunciation and the use of the basic patterns of speech. Intensive reading is conducted for textbook lessons. Grammar is explained, and written exercises given. Traditional characters are learned in Chinese 1 and 2; simplified characters are introduced in Chinese 3. Classes are conducted increasingly in Chinese. Mandatory student-run drill sessions meet Monday to Thursday for fifty minutes each day for all beginning Chinese language classes. Students who plan to use these courses to fulfill the language requirement may not take it under the Non-Recording Option.

JAPN 1. First Year Courses in Japanese
An introduction to written and spoken Modern Japanese. In addition to mastering the basics of grammar, emphasis is placed on active functional communication in the language, reading comprehension, and listening comprehension. Conversational drill and comprehensive exercises in classroom and laboratory provide practice in pronunciation and the use of the basic patterns of speech. Classes are conducted in Japanese.

As you explore this guide, circle seven to ten courses that interest or intrigue you. Keep your mind open and curious!
the US not simply as a fact but as a project, this course avoids portraying Korea through any generalized statements or uncritical categories. Rather, students are encouraged to explore novel perspectives on Korea and thereby unravel their own prejudices and agendas. No prior acquaintance with the Korean language is required. Dist: SOC; WCult: CI.

ASCL 10.03 Introduction to Japanese Culture
Japanese cultural history through a broad survey of literature, art, social and political institutions, and popular culture. Modern conceptions of Japan and formations of Japanese identity have evolved under the pressures created by radical swings between periods of wholesale appropriation of foreign cultural forms and periods of extreme isolation. The course will trace the evolution of Japanese culture by examining the ways in which cultural archetypes are distinguished in Japan. Taught in English. Open to all classes. Required for the LSA, major and minor. Dist: LIT; WCult: CI.

Astronomy
(See program description under Physics and Astronomy.)

Biological Sciences (BIOL)
The Department of Biological Sciences offers a highly flexible major and a wide variety of courses, research opportunities, and experiences for Dartmouth undergraduates. The research interests of the faculty include molecular and cellular biology, ecology and evolutionary biology, developmental biology, neurobiology, and computational biology. Biology majors can focus their studies on a wide range of different areas within biology, and the major can include selected courses from other departments.

The Department of Biological Sciences offers a Foreign Study Program (FSP) in tropical ecology that includes an introduction to studies of rain forests, coral reefs, and other tropical environments. For more information, please visit: https://biology.dartmouth.edu/

For many students, BIOL 11 (The Science of Life) is the entrance course to the major and the minor. This topics-based course with no laboratory is offered in the fall, winter and spring during the 2022-2023 academic year. BIOL 11 may be counted toward the Biology major or minor if it is taken during the first year or as the first Biology major course. The Biology department has established an online self-assessment exam (available in Canvas) for students to use as a guide to determine if they should start their study of Biology with BIOL 11 or if they should enroll directly in a more advanced Foundation course (BIOL 12-16 or 19).

Topics for the three offerings of BIOL 11 during the 2022-2023 academic year are:

Fall: Major Events in the History of Life and the Human Genome
Winter: Emerging Infectious Diseases
Spring: Animal Minds

Foundation courses include BIOL 12 (Cell Structure and Function, fall and spring); BIOL 13 (Gene Expression and Inheritance, winter and summer); BIOL 14 (Physiology, fall and winter); BIOL 15 (Genetic Variation and Evolution, winter); BIOL 16 (Ecology, fall and spring) and Biology 19 (Honors Cell Structure and Function, fall, open only to first-year students). Students must successfully complete three of the five Foundation courses for the major. A Biology minor must successfully complete two Foundation courses. Students interested in Biology FSP are encouraged to take BIOL 16 in fall or spring of their first year and BIOL 15 in their first or second year.

To complete the major, students, in consultation with their faculty advisor, focus in an Area of Concentration by taking seven additional courses including two advanced courses numbered 50 and above. A student minoring in Biology must complete four additional courses. Additional prerequisites for the major and minor include CHEM 5 and CHEM 6, and one quantitative course from among COSC 1, ENGS 20, EARS 17, BIOL 29, MATH 4, and MATH 8 or above. MATH 10 (or equivalent) also satisfies the quantitative requirement. In addition, many graduate and professional schools require CHEM 51-52 for admission, so we highly recommend that students consider taking these courses while at Dartmouth. Although non-majors can (and are encouraged to) enroll in BIOL 11 and Foundation courses, the department also offers a course intended primarily for non-majors: BIOL 2 (Human Biology, fall).

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:

2. Human Biology (does not count for major/minor credit)
A course designed to help students (biologists and non-biologists) understand the biological basis of human health and disease. The course will emphasize the fundamental aspects of biochemistry, genetics, cell and molecular biology, physiology, anatomy, reproductive biology, and structure/function of various organs as they relate to humans. Particular emphasis will be placed on specific topics in human health and disease and how these issues affect us all individually in our own health and collectively in our international society. Dist: SCI.

11. The Science of Life
Biology, like all of science, is a problem-solving endeavor. This course introduces students to a major problem in biology, and considers it from many different perspectives, viewpoints and biological levels of organization. Along the way, students are exposed to many of the major concepts in biology, from molecules to ecosystems. Each offering will address a different major problem. Dist: SCI.

Fall Topic for BIOL 11: Major Events in the History of Life and the Human Genome
Over the course of the last 4.5 billion years, life has faced a number of challenges, and in response has evolved a number of remarkable innovations. These innovations are written in DNA, and thus molecular fossils for many of the major events in the history of life can be found within our very own genomes. This course will survey the human nuclear and mitochondrial genomes, using a gene or region from a chromosome as a “ticket” to a particularly important event or process in the history of life. Dist: SCI.

12. Cell Structure and Function
BIOL 12 will provide a foundation in the fundamental mechanisms that govern the structure and function of eukaryotic cells. Topics include membrane transport, energy conversion, signal transduction, protein targeting, cell motility and the cytoskeleton, and the cell cycle. Emphasis will be placed on discussion of the experimental basis for understanding cell function. The laboratory section will provide students with hands-on experience in modern laboratory techniques including microscopy, cell fractionation, and protein purification. Dist: SLA.

14. Physiology
BIOL 14 introduces students to the complexity of organisms by studying how their different organ systems strive to maintain internal homeostasis in the face of different environmental demands. The adaptive responses of selected organisms (humans, different animals and plants) to a variety of environmental factors will be studied from the molecular, cellular, tissue, organ, and systems level of organization. Some of the topics to be covered include biological control systems (hormones, neurons) and coordinated body func-
Recommended Courses for First-Year Students

16. Ecology
This course examines fundamental concepts in the rapidly developing areas of ecology. These topics include the factors that limit the distributions and abundances of organisms, the effects that organisms have on ecosystems, the integration of ecosystems around the globe, and the conservation of species diversity. The class will also explore how the behavior and physiology of individual organisms shape both local and global patterns of distribution and abundance. Laboratories focus on experimental and quantitative analyses of local ecosystems, with an emphasis on field studies. Dist: SLA

19. Honors Cell Structure and Function
This honors introduction to cell biology is for students with a strong background in biology and chemistry. This course will discuss fundamental topics, including protein targeting, the cytoskeleton, membrane transport, cellular energetics, the cell cycle, and signal transduction. The course will emphasize experimental strategies to understand eukaryotic cell function, and the laboratory will provide hands-on experience in modern cell biological techniques, including microscopy, cell fractionation, and protein purification. Biology 19 is open only to first-year students and enrollment is limited. Invitation to enroll will be based in part on performance on the Biology Placement Exam (online). Biology 19 is a foundation course equivalent of Biology 12. Dist: SLA.

Chemistry (CHEM)
Dartmouth students who are interested in chemistry or wish to develop a background in chemistry for study in another field or a variety of professions have outstanding opportunities at Dartmouth. The Chemistry Department is known for excellent teaching and close student-faculty relations in nationally competitive research programs. Courses and research in the fields of inorganic, organic, physical, theoretical, computational, materials and biological chemistry, and structural biology, are supported by modern instruments and computers in laboratories where fundamental concepts and skills are learned and cutting-edge research is conducted. Graduate students in our Ph.D. program and postdoctoral research associates help to ensure a stimulating scientific environment where state-of-the-art research equipment is accessible to undergraduates.

All chemistry majors are welcome to attend the weekly departmental colloquium, which features speakers from other universities and from industry. Undergraduate research students attend the research seminars of their faculty mentor's research group. Graduate courses allow undergraduates to pursue specific interests in advanced topics as these develop. Chemistry faculty members are dedicated educators and the department ranks at or near the top in undergraduate ratings of teaching quality at Dartmouth. The Department believes it has one of the best undergraduate programs in chemistry at any college or university.

The Chemistry Department offers two parallel introductory sequences, each of which are prerequisite to more advanced courses in chemistry. Students with credit-on-entrance for Chemistry 5 (see below), take Chemistry 11 (General Chemistry), a one-term course, offered in the fall and spring terms, that completes a college level curriculum in general chemistry. All other students will take an on-line chemistry placement test (see below) to determine the appropriate sequence for their background in chemistry, either Chemistry 5 and 6 (General Chemistry), which are offered in the fall (5), winter (5, 6) and spring (6) terms, or Chemistry 11. Mathematics 3 is a prerequisite for Chemistry 5 and, if necessary, is taken in the fall before Chemistry 5 in the winter. Mathematics 3 is also a prerequisite for Chemistry 11 and, if necessary, is taken in the fall or winter before Chemistry 11 in the spring. Upon completion of Chemistry 11, students are given pre-matriculation credit for Chemistry 5, if they do not already have this from credit-on-entrance.

5-6. General Chemistry

11. General Chemistry
For students who wish to major in Chemistry, Biophysical Chemistry or Biological Chemistry, it is important to begin taking chemistry courses early, and they are strongly encouraged to take Chemistry 5-6 or Chemistry 11 in their first year. None of the major programs precludes off-campus activities, such as Language Study Abroad. Students who are interested in combining chemistry and engineering should plan their program in consultation with both the undergraduate advisor at Thayer and one of the members of the Undergraduate Advising Committee of the Chemistry Department at the start of the first year. Students contemplating a major in the physical sciences, but undecided between physics and chemistry, should note that Mathematics 3 and 8, Chemistry 5-6 or Chemistry 11, and Physics 13-14 will serve as good preparation for further study in either field.

CREDIT ON ENTRANCE
Students with a score of 4 or 5 on the CEEB Advanced Placement (AP) chemistry examination, a score of 6 or 7 on the higher-level International Baccalaureate (IB) chemistry examination or a grade of A on the British A-level chemistry examination will receive credit-on-entrance for Chemistry 5 and placement into Chemistry 11. If they also have credit-on-entrance for, or an exemption from, Mathematics 3, they are eligible to enroll in Chemistry 11 in the fall term.

PLACEMENT ON ENTRANCE
All students who wish to take chemistry courses at Dartmouth, except those who receive credit-on-entrance for Chemistry 5, must take the on-line chemistry placement test (see https://chemistry.dartmouth.edu) to determine if they should be placed into Chemistry 5 or Chemistry 11. This examination is typically taken during the summer before matriculation but may be taken later if a student decides they need, or want, to take general chemistry at Dartmouth. Students are strongly encouraged to prepare for this test by reviewing their high school chemistry material and consulting material available on the Chemistry Department website, https://chemistry.dartmouth.edu

TRANSFER CREDIT
Students who have taken college chemistry courses prior to matriculation at Dartmouth and wish to receive transfer credit-on-entrance for Dartmouth chemistry courses should contact the Chair of the Chemistry Department early in the fall term.

Chinese
(See program description under Asian Societies, Cultures, and Languages.)

Classics (CLST, LAT, GRK)
The study of Classics takes in every aspect of Greek and Roman antiquity, with direct connections to many contemporary concerns. Multiple disciplinary perspectives within the department empower students to explore ancient texts, artifacts, and archaeological sites in complex ways. Courses in Latin and Ancient Greek are available from beginning through advanced levels, offering swift access to major works of the Western tradition in their original languages. Every Classics course aims explicitly to develop analytical thinking, speaking, and writing skills. The legacies of the ancient Mediterranean world are scrutinized as well as appreciated.

The Classics Department offers courses under three different rubrics. Classical Studies courses, labeled CLST, do not require any knowledge of Latin or Greek. This area of the curriculum includes courses on Greek and Roman archaeology, history, literature, philosophy, and religion. Courses labeled LAT or GRK are language courses at various levels. The department also sponsors Foreign Study Programs in Greece and Italy.

Major programs within the department include not only the broad-based major in Classical Studies but also more specific majors in Ancient History, Classical Archaeology, and Classical Languages and Literatures. Students who choose these majors often go on to medical school, law school, or directly into a wide range of profes-
CLST 6. Introduction to Classical Archaeology

CLST 5. The Heroic Vision

CLST 18. History of the Roman Empire

CLST 11.02 Rediscovering Sparta

PLACEMENT IN LATIN COURSES

Students who are just beginning their study of Latin should take LAT 1 in either Fall or Winter, followed by LAT 2 and LAT 3. Successful completion of Latin 3 prepares the student for LAT 10. Those who enter Dartmouth with some prior study of Latin will be automatically placed into Latin 2, 3, 10, or 15, according to their scores on the Advanced Placement Test or SAT II Subject Test. Placement is also available through the department’s online test, which can be accessed during August and the first week of September at https://canvas.dartmouth.edu. If you do not see the link, you may request access through Professor Lynn (jenny.lynn@dartmouth.edu). Those who do especially well on the online test will be given an initial placement into Latin 3 and invited to take an on-campus written test, which will determine placements into Latin 10 or 15.

PLACEMENT IN GREEK COURSES

Students who are just beginning the study of Ancient Greek may take GRK 1 in Winter Term, followed immediately by GRK 3 in Spring or, they have the option of a double-credit intensive course, GRK 1-3 in the Spring term. Successful completion of GRK 3 prepares the student for GRK 10. Students who have studied Greek in high school should consult with Professor Tell (hakan.tell@dartmouth.edu) to determine their placement.

The following courses are recommended for first-year students in 2022-23:

CLST 1. Antiquity Today
CLST 2. The Tragedy and Comedy of Greece and Rome
CLST 5. The Heroic Vision
CLST 6. Introduction to Classical Archaeology
CLST 7. First-Year Seminar in Classics
CLST 11.02 Rediscovering Sparta
CLST 15. Alexander the Great and the Macedonian Kings
CLST 18. History of the Roman Empire
CLST 20. Greek Archaeology: First Hominids to Mycenaean Palaces
CLST 24. The Birth of Rome
GRK 1. Introductory Ancient Greek
GRK 1-3. Intensive Ancient Greek
GRK 3. Intermediate Greek
GRK 10. Readings in Greek Prose and Poetry

GRK 20. Homer
GRK 28. Plato’s Symposium
GRK 29. New Testament
LAT 1. Introductory Latin
LAT 2. Introductory Latin II
LAT 3. Intermediate Latin
LAT 10.02. Reading Latin Texts
LAT 10.15. Literature and the Romans
LAT 31. The Italian Countryside
LAT 33. The Literature of Science

SELECTED COURSES THAT EXPLORER THIS DEPARTMENT OR PROGRAM:

CLST 1. Antiquity Today
The Romans had the Colosseum, the Greeks had the dramatic stage. What does the different ways they staged violence tell us about the Romans and the Greeks? Topics we cover include Greek and Roman religious beliefs, approaches to classifying and evaluating sexual behaviors, and systems of government. In all cases we will use what we learn to help think about our own practices and predications.

CLST 2. The Tragedy and Comedy of Greece and Rome
The course studies in translation selected works of Aeschylus, Sophocles, Euripides, Seneca (tragedy), Aristophanes and Plautus (comedy), and some of their central themes and questions: law, community, revenge, passion, and justice. We will approach them both as texts and as scripts, considering their relationship to other types of performance and genres as well as to theatrical space.

CLST 5. The Heroic Vision: Epics of Greece and Rome
Homer’s Iliad and Odyssey, Vergil’s Aeneid, and Ovid’s Metamorphoses are among the best known and most influential works to survive from the ancient world. Yet as products of societies vastly different from our own, they remain challengingly unfamiliar. This course offers the chance to study these four epics in their entirety, together with the Argonautica of Apollonius of Rhodes and extensive selections from Lucretius’ De Rerum Natura. Emphasis will be placed on the historical and cultural contexts in which the poems were produced and on how each poet uses the works of his predecessors to define his own place in the epic tradition.

CLST 6. Introduction to Classical Archaeology
Introduces basic methods and principles of Classical archaeology through a survey of characteristic sites and artefacts. Students will

gain a good overview of the approaches useful in the interpretation of a wide variety of material evidence, as well as an introduction to Greek and Roman civilization from prehistory to the collapse of the Roman Empire.

CLST 11.02 Rediscovering Sparta
The city-state of Sparta, which played a leading role in the Greek world for centuries, continues to exercise a hold on the imagination of scholars and non-scholars alike. This course explores the birth, rise, and fall of the Spartan state, from its foundation c. 1000 BCE to 371 BCE and the disastrous defeat at Leuctra, which effectively ended Spartan hegemony. We will pay careful attention to both the relevant literary sources and to the extant remains of Spartan material culture, such as pottery and figurines; hence this course draws on the subject matter and methodologies typically associated with both history and archaeology.

CLST 18. History of the Roman Empire
Survey the major events in the history of Rome from 31 B.C. through the rule of Septimius Severus. During this period, the Roman empire became a political community extending throughout the Mediterranean and northwards into Europe as far as Scotland. This course considers the logic of the Roman system: the mechanisms promoting the political identity of diverse peoples, the reasoning whereby the leadership of a single individual was conceived as necessary and good; the definition of frontiers and the role of the army in the assimilation of non-Roman peoples.

CLST 20. First Hominids to Mycenaean Palaces
Traces the cultural evolution of humanity in the Aegean basin from the era of hunting and gathering through the early village farming stage into the age of the great palatial cultures of Minoan Crete and Mycenaean Greece. In the latter half of the course, study of the palaces, fortified citadels, and royal tombs at such sites as Knossos, Mycenae, Tiryns, and Troy will lead to discussions of the myths about Atlantis, King Minos’ sea empire, and the Trojan War, and their basis in historical fact.

CLST 24. The Birth of Rome
Why did the Rome emerge as the most powerful city of the Western world? How did later Romans remember and heroize the events that led to their supremacy? We will trace this remarkable transformation through both science and literature: the physical evidence recovered through archaeology, and literary accounts in Greeks’ and Romans’ prose and poetry that tell stories of Rome’s foundation and struggle for survival.

GRK 10. Readings in Greek Prose and Poetry
For those who have already studied the basics of the language. Readings drawn from Greek tragedy will illustrate foundational concepts of the culture.
Recommended Courses for First-Year Students

GRK 28. Plato’s Symposium
A small-enrollment seminar offering an introduction to Plato’s thought and to a rich vein of material illustrating Greek attitudes and assumptions on erotic love for both sexes. May also be taken as CLST 10.14.

GRK 29. New Testament
A brief introduction to the language, vocabulary, and idiom of New Testament Greek, followed by readings in the Gospels and the Epistles of St. Paul. May also be taken as CLST 10.13.

LAT 1. Introductory Latin
A rapid introduction to the Latin language through reading passages of gradually increasing difficulty, with supporting materials on Pompeii and Roman Egypt.

LAT 10. Reading Latin Texts
An introduction to continuous readings of Latin prose and poetry in combination with a review of Latin grammar. Students develop the necessary language and study skills to allow them to take more advanced Latin courses.

LAT 10.15 Literature and the Romans
For those who have already begun studying Latin literature. Covers essential elements of Roman literary culture and its academic study today: literacy, book production, textual transmission, and the nature of literature. Also introduces library resources, including materials for reading Latin inscriptions and illuminated manuscripts in Dartmouth’s collection.

LAT 33 The Literature of Science
The ancient Greeks and Romans studied natural phenomena passionately and considered the pursuit of scientific knowledge a mind-transforming experience that was sublime and potentially even sacred. Readings will be drawn from poets, such as Lucretius and Manilius, and/or prose authors, like Seneca and the Elder Pliny. Potential topics include ancient physics, astronomy, meteorology, and natural history.

Cognitive Science (COGS)
Cognitive science is the study of cognition from an interdisciplinary perspective. The core component disciplines of cognitive science are philosophy, psychology, neuroscience, linguistics, and computer science. Cognitive scientists may focus on particular cognitive faculties, such as language or memory, on specific cognitive phenomena, such as empathy, or on understanding the fundamentals of cognition quite broadly, for example, in information-theoretic terms. What sets cognitive science apart from its core areas is its commitment to cross-disciplinary methodology. Students wishing to pursue work in cognitive science take a defined group of core courses and then a series of electives selected from courses taught in a variety of departments.

The following courses are recommended for first-year students (COGS):

- COGS 1. Introduction to Cognitive Science
- COGS 02/PSYC 28. Cognition
- COSC 01. Introduction to Programming and Computation
- LING 01. Introductory Linguistics
- PSYC 01. Introductory Psychology
- PSYC 40. Introduction to Computational Neuroscience

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:

- COSC 01. Introduction to Programming and Computation
- CS 1 will teach you to design, write, and analyze code to solve computational problems from a range of disciplines. You’ll also learn to think about problems the way a computer scientist thinks—a skill that is valuable in any field. The course is suitable for students with no previous background in Computer Science, and no knowledge of mathematics beyond high-school algebra. DIST: TLA.

- PSYC 01. Introductory Psychology
A course designed to serve as a general introduction to the science of human behavior. Emphasis will be placed upon the basic psychological processes of perception, learning, and motivation as they relate to personality, individual differences, social behavior and the behavior disorders. DIST: SOC.

- PSYC 40. Introduction to Computational Neuroscience
The mind is what the brain does, and the brain is becoming understood computationally. Computational neuroscience has as its twin goals the description and characterization of the brain and the brain is, let alone how that shapes the story. It’s not always easy to determine who the narrator is, let alone how that shapes the story. Sometimes narrators are reliable, sometimes they’re not, and sometimes they only seem reliable. Short background readings in narratology and rhetoric, psychoanalysis, literary and film criticism, and journalism will help us ask (along with Samuel Beckett), “What does it matter who is speaking?” This question will frame our investigation of other inquiries such as: who tells this story? How do we know? What difference does it make? How would the story look if told by a different storyteller or in different circumstances? Along the way, we will examine the role of the medium (written, filmed, audio) and genre (e.g. detective novel, autobiography). Adaptations from written texts to the screen sometimes involve changes in PoV, and these are particularly illuminating. We will also write some stories and variations of our own.

19.01 Translation
Translation is both a basic and highly complicated aspect of our engagement with literature. We
often take it for granted; yet the idea of meanings lost in translation is commonplace. In this course we work intensively on the craft of translation while exploring its practical, cultural and philosophical implications through readings in theoretical and literary texts. All students will complete a variety of translation exercises, and a substantial final project, in their chosen language.

**42.01 Prada, Chanel, Ferrari: History and Literature**

Often described as a frivolous topic, fashion is at the center of this class that analyzes it as a cultural sign, as an industry, and an indicator of social change. The professors will use interdisciplinary tools borrowed from disciplines such as literature, film, art history, economics (ethics of production and consumption will also be at examined,) history, sociology, and geography. The discussions will not only focus on European fashion, but also African, Middle-Eastern, and Asian design.

**45. The Quest for Utopia**

Thomas More's Utopia was long considered the ultimate paradigm of the kind of vision that utopian thought can produce. But there is no question that More's narrative of Utopia is just a particular example of a very dynamic and complex way to think about historical dead-ends and to envision alternative realities. In this course we will deal with the nature of utopian vision and with the particular dynamics that characterize utopian thought. We will also discuss present day utopias as we try to answer questions like: Is the idea of utopia really dying in our modern world? Are there new utopian visions being generated today, different from More's but with a similar function? What is the relationship between utopia and fantasy, utopia and history, utopia and revolution? What are the utopian constructs of our time and how do they shape our perceptions, our political options, and our social and personal actions?

**70.03 European Jewish Intellectuals**

The course will examine the role of the Jewish intellectual in twentieth century Europe. We shall focus on several paradigmatic figures (Arendt, Benjamin, Adorno, Levinas, Derrida) who confront the redefinition of politics and civil society in modern times. Some attempt to deal with these changes through a critical reflection on the concepts of democracy and ethics and on how justice can be practiced either within or outside of the geographical and spiritual boundaries of the modern nation state. We shall examine how Jewish self-consciousness and a deep attachment to biblical tradition enables these intellectuals to reconcile ethical imperative with political realities. Particular attention will be paid to topics such as the challenges of Eurocentric Christian humanism and universalism to Jewish assimilation; the promises of totalitarianism, Marxism and messianism; the politics of biblical exegesis; history and Jewish mysticism; Zionism, anti-Zionism and the Arab-Israeli conflict.

**72.01 Global literary Theory**

Comparative Literature entails conscious engagements with theories of literature, language, and culture from throughout the world. This course ranges across some of the ideas that have been influential in shaping scholarly questions in a variety of languages. It also addresses the global dimensions of theory: rhetorics and ethics of comparison, world literature, and indigenous knowledges.

**Computer Science (COSC)**

Students interested in taking more than one course in computer science usually start with COSC 1 (Introduction to Programming and Computation) in the fall, winter, or spring, followed by COSC 10 (Problem Solving Via Object-Oriented Programming) in the fall, winter, or spring. COSC 1 is an introductory course, which does not assume any computer science experience or background, and it can be taken as early as first-year fall. COSC 10 develops skills in solving problems computationally. It assumes previous programming experience (COSC 1 prerequisite) and uses Java.

The following courses are recommended for first-year students (COSC):

1. Introduction to Programming and Computation
2. Problem Solving via Object-Oriented Programming
3. 3D Digital Modeling
5. Discrete Mathematics in Computer Science
6. Software Design and Implementation
7. Foundations of Applied Computer Science

**ADVANCED PLACEMENT**

A student who receives a 4 or 5 on the AP Computer Science A examination receives placement into COSC 10 and COSC 30. A student may instead take a departmental computer science exam (*) to determine if they will receive placement into COSC 10 and COSC 30; this placement exam is administered only during Orientation.

**TRANSFER CREDIT**

The Department of Computer Science does not give transfer credit for courses taken at other institutions before matriculation at Dartmouth. Students who feel that they know the material in COSC 1 can be placed out of COSC 1 by taking the local placement exam as described above. Students who feel that they know the material in a higher-level computer science course should see the computer science undergraduate program director during Orientation to arrange to take an examination on the material.

**SELECTED COURSES THAT EXPLOR THIS DEPARTMENT OR PROGRAM:**

1. Introduction to Programming and Computation

This course introduces computational concepts that are fundamental to computer science and are useful for the sciences, social sciences, engineering, and digital arts. Students will write their own interactive programs to analyze data, process text, draw graphics, manipulate images, and simulate physical systems. Problem decomposition, program efficiency, and good programming style are emphasized throughout the course. No prior programming experience is assumed. Dist: TLA.

**Earth Sciences (EARS)**

Earth Science is a field-based, interdisciplinary science that uses the principles of chemistry, physics, biology and mathematics to 1) understand the origins and evolution of natural features such as mountains, rocks, lakes, air, oceans, weather, flora, and fauna; 2) understand the scientific basis of important environmental issues such as surface and groundwater contamination, global climate change, and the interactions of life, including its origins, with earth processes; and 3) assess, find, and extract natural resources such as groundwater, petroleum, and ores.

The core of the Earth Sciences degree is our off-campus field program, the Stretch, usually taken during the fall term of the junior year. The Stretch is made up of a series of segments, each taught by a different professor in a different location. Topics covered include geologic structures and landforms, river and lake processes, volcanism, geochemistry of environmentally fragile ecosystems, glacial processes, and the geological origins of western North America. These segments currently take place in the Canadian Rockies, Wyoming, Montana, Utah, Nevada, California, and Arizona.

There are two majors in earth sciences: one in environmental earth sciences and one in earth sciences. The prerequisites for the two majors are the same, but the courses recommended for the majors differ slightly. Students interested in modi-
Recommended Courses for First-Year Students

Prerequisites for the earth sciences or environmental earth sciences major include one of the introductory courses (Earth Sciences 1-9 exclusive of 7), Chemistry 5 (or CHEM 11), and any one of the following taken at Dartmouth: Math 3, 8, 9, 11, 12, 13, 14, 23, or 46. Earth Sciences 40, offered during the summer term, is a prerequisite for the off-campus field program in earth sciences, which is required for the major.

The following courses are recommended for first-year students (EARS):

**SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:**

**1. How the Earth Works**
This course explores the making of our planet — from the big bang to the subsequent formation and evolution of the Earth. We investigate how earthquakes, volcanic eruptions, and global climate change are byproducts of our planet's ceaseless activity and see that these natural forces are essential for creating the conditions necessary for life in all its diversity. We will learn how to decode Earth's dynamic history by reading the record preserved in rocks, oceans, and glaciers. We will also see that life is not only at the mercy of our planet's natural forces, but since its inception has been an agent of environmental change as well, altering the Earth's land, water, and air faster than many geologic processes. Dist: SLA.

**6. Environmental Change**
This course investigates the science of natural and human induced environmental change on a global scale. The Earth has never existed in a pristine balanced state, and an understanding of pre-industrial changes in the Earth's environment provides important information that we can use to interpret current environmental change. Topics that will be discussed include: the evolution of the atmosphere, global temperature variation, sea level change, atmospheric trace gases and global warming, stratospheric ozone, acid rain and tropospheric ozone, human migration and landscape development, and global catastrophes. Dist: SCI.

**14. Meteorology**
Introduction to the science of the atmosphere, emphasizing weather and weather forecasting, but including atmospheric variations on all scales from tornadoes, through the Little Ice Age, to Snowball Earth. We begin by discussing the properties of air and a few basic physical principles that control all atmospheric phenomena. These principles enable us to understand weather systems and associated fronts, clouds, winds, and precipitation, and to forecast weather using simple visual observations, satellite data and supercomputers. They are also the basis for the global circulation of air, energy and water. As well as the restless changing, diverse climate zones of our planet. Additional topics may include air pollution, deliberate and inadvertent weather and climate modification, aviation and marine weather, and atmospheric chaos. Dist: SLA.

**Economics (ECON)**
Economics is the study of how societies organize themselves to produce and distribute goods and services—from bread to iPads, from housing to health care. The world is constantly confronted with important public policy issues that are essentially economic in character. Economic analysis provides a coherent and principled framework for examining and understanding the tradeoffs involved in attempting to solve important social problems. Individuals who are not familiar with economics are at a serious disadvantage in the public debate over questions concerning government spending and social insurance, international trade policy, corporate governance and the stock market, and a host of other issues.

**PREREQUISITES**
The starting point for the Economics major is Economics 1. It is a prerequisite for every other class in the major. The other prerequisites for the major are Economics 10, Introduction to Statistical Methods and Math 3, Introduction to Calculus. Students who have not satisfied the Math 3 requirement through their high school coursework should enroll in Math 3 in the fall or winter of their first year.

**ADVANCED PLACEMENT**
Students will receive placement out of Economics 1 (Microeconomics) if they score 5 on the Microeconomics Advanced Placement Exam, 6 or higher on the Higher Level International Baccalaureate exam, or an A in British A-Level Economics. Students who receive placement out of Math 10 via the AP Statistics exam are also exempt from taking Economics 10.

**MAJOR COURSES**
Below is a list of courses that are often taken by first year students. The required prerequisites are listed in parentheses. All major courses require Econ 1 and many require Math 3, so it is important to complete these courses as soon as possible. Many students also take Econ 20 early to complete the economics prerequisites. Economics 21 and 22 are logical next choices for potential majors, but students are welcome to take any course for which they have the prerequisites.

The following courses are recommended for first year students (ECON):
1. The Price System
3. Essential Mathematics for Economic Analysis
10. Introduction to Statistical Methods (Math 3)
15. Political Economy of China (Econ 1)
16. Political Economy of Regulation (Econ 1)
21. Microeconomics (Econ 1, Math 3)
22. Macroeconomics (Econ 1, Math 3)
26. Financial Intermediaries and Markets (Econ 1)
27. Labor Economics (Econ 1)
28. Public Finance and Public Policy (Econ 1)
37. Gender and Family Issues in Modern Economics (Econ 1)
38. The Economics of Governments and Public Policy (Econ 1)
39. International Trade (Econ 1)

**SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:**

**01. The Price System: Analysis, Problems and Policies**
Emphasis will be placed on problems and policies of current interest as they relate to resource use and the distribution of income and output. Students will receive an introduction to the theory of supply and demand in both product and factor markets in order to examine selected topics drawn from such areas as industrial organization and antitrust policy, labor economics, international trade, economic development, agriculture, urban problems, poverty and discrimination, public sector economics, and environmental problems. Dist: SOC.

**03. Essential Mathematics for Economic Analysis**
This course covers many of the same basic calculus topics as Math 3, but with the focus on developing an understanding of the mathematical structure of economics, since having mathematical skill is essential to the study of economics. Examples of economic applications of calculus topics include using derivatives to study consumer demand and labor productivity and using integrals to study income distributions. Additionally, key statistical measures needed for econometrics classes, such as expected value and variance will be introduced. Dist: QDS

**10. Introduction to Statistical Methods**
This course introduces the student to the basic concepts and methods of statistics. It covers descriptive statistics and inference (estimation and hypothesis testing) for a single variable and for two variables. The probability theory required for these topics will be developed. Dist: QDS.

**15. Political Economy of China**
This course examines how politics, economics, and culture have shaped the modern Chinese economic policy. Course topics include the Mao era, the pathologies of socialism and central planning, and the post-Mao transition to the market. Special emphasis will be placed on how “capitalism with Chinese characteristics” affects innovation, entrepreneurship, and law. Dist: INT or SOC.

**16. Political Economy of Regulation**
This course examines the history, politics and eco-

15
nomic of market regulation in the United States. Class discussions will focus on the arguments for and against state intervention in the market. We will also explore the meaning of “market failure” and “government failure” in the context of financial markets, transportation, the environment, health care, and public utilities. Dist: SOC.

21. Microeconomics
This course is a study of the pricing and allocation process in the private economy. Topics include the theories of demand and production, and the determination of prices and quantities for commodities and factors of production in competitive and noncompetitive markets. Applications of the theory and its implications for empirical analysis are also considered. Dist: SOC.

22. Macroeconomics
This course is concerned with the behavior of the economy as a whole, particularly fluctuations in economic activity. General equilibrium models are developed to analyze the determinants of GNP, unemployment, the rate of inflation, and the growth of output. The micro foundations of macro aggregates are developed, with special emphasis on the role of expectations. The analytic tools are used to evaluate monetary and fiscal policies and to understand current macroeconomic controversies. Prerequisites: Mathematics 3 and Economics 1. Dist: SOC.

26. The Economics of Financial Intermediaries and Markets
This course examines the nature and function of financial intermediaries (e.g., banks, mutual funds, and insurance companies) and of securities markets (e.g., the money and capital markets and the market for derivatives). It analyzes liquidity and risk management and studies the efficiency, stability, and regulation of the financial system. Dist: SOC.

27. Labor Economics
This course studies the economic behavior of employers and employees as they interact in the labor market. The class will move beyond the basics of labor supply and demand to cover such topics as human capital investment, the structure and determinants of financial compensation and benefits packages, contract negotiations and arbitration. Additionally, since many of the pressing problems facing the United States are labor market issues, this course will provide a basis for better understanding of nationally-debated issues such as reforms of the welfare system, the income tax system, immigration policy, and affirmative action programs. Dist: SOC.

28. Public Finance and Public Policy
Government policies exert a pervasive influence over the economy and people’s wellbeing. This course first analyzes the economic effects of public policies in the areas of environmental pollution, social insurance, retirement income, health, and poverty alleviation. The course then studies how governments finance their operations, paying attention both to institutional details and the effects of tax systems on efficiency and inequality. Throughout, we use empirical evidence and economic reasoning to better understand economic tradeoffs involved in current and proposed policies, including health reform, universal basic income, wealth taxation, unemployment insurance, fundamental tax reform, and Social Security. Dist: SOC.

37. Gender and Family Issues in Modern Economies
This course examines the changing economic roles of women and men in modern economies and the trade-offs faced by households. The origins and persistence of these trade-offs are analyzed through the lenses of economic model. The ultimate objective is to provide you with the tools to critically address a wide range of real-world questions related to gender and family. For instance: How have technological changes in the home and the market transformed families? What forces led married women to enter paid employment? What forces might lead them to “opt-out”? Dist: SOC.

38. The Economics of Governments and Public Policy
Fundamental questions in public finance concern when and how governments should intervene in the economy. However, another fundamental question is: why do governments do what they do? This course considers governments as economic actors. We will theoretically and empirically investigate how social decisions are made; why governments fail; why different levels of government (federal, state, local) fund different public goods and services; and how governments at different levels interact. Topics to be covered include externalities and public goods, political economy, and fiscal federalism. K-12 education in the United States will provide a detailed case study, though other applications may be considered from time to time. Course involves an empirical project. Dist SOC.

39. International Trade
This course deals with the causes and consequences of international trade and factor movements. Topics covered include theories of why nations trade, the consequences of trade for economic welfare and the distribution of income, the determinants of trade patterns, the tariff and other forms of commercial policy, trade policies of selected countries, and the formation of the multinational corporation. Dist: SOC or INT.

Education (EDUC)
Education is an integral part of Dartmouth’s liberal arts tradition. In both courses and research, students can investigate the complex world of education through a research-based, interdisciplinary lens. Our courses are open to all students and have no prerequisites, although we suggest taking EDUC 01 to start (see http://educ.dartmouth.edu/). We offer a minor in Education. The minor is composed of six courses: EDUC 01, along with any five other Education courses.

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:
1. Introduction to Education: Learning, Development, and Teaching
Education, development, and learning are inextricably intertwined. In this course, we will explore how pre-Kindergarten through high school education is informed by scientific evidence across multiple domains. Topics to be explored may include the educational system in America; the research-to-practice gap and educational misconceptions; social, emotional, and motivational development in school context; memory, strategies, metacognition, and assessment as related to learning and learning and teaching in early math, science, and reading. Dist: SOC.

Engineering Sciences (ENGS)
The engineering sciences department is dedicated to educating well-rounded engineers within the context of liberal arts. We regard the ability to think quantitatively as a valuable part of a liberal arts education and thus provide a variety of ways for all students to increase their understanding of the relationship between technology and society.

Your very first engineering course, Introduction to Engineering—ENGS 21—is usually taken
Recommended Courses for First-Year Students

at the end of your first year or beginning of sophomore year and will challenge you to develop a novel solution to a real-life problem. You’ll team up with classmates to define a problem and solve it by designing a device or system. That’s because we know the best way to learn engineering is to do engineering.

The major is excellent preparation not only for the engineering profession but also for medicine, law, business or other careers that require ability in quantitative analysis, design and problem solving. All engineering sciences majors earn a Bachelor of Arts (AB) and most also earn the ABET Accredited Bachelor of Engineering (B.E.) degree. The BE degree requires approximately 9 courses beyond the AB major. Most students will add 1, 2, or 3 terms in a fifth year but students may also plan ahead to finish a combined AB/BE in four years within the traditional Dartmouth 36 courses. Need-based financial aid for the additional terms is available.

The major may be modified with other sciences or with studio art, economics, or public policy. In addition to the standard major and minor and the modifications, we offer:

- Engineering Physics major for students interested in applied physics or more fundamental aspects of engineering science;
- Biomedical Engineering Sciences major for students who wish to apply to medical school after Dartmouth;
- Human Centered Design minor focused on the process of innovation for addressing human needs;
- Materials Science minor offered by the departments of Chemistry, Physics, and Engineering which can be combined with majors in any of the three areas.

MAJOR COURSES

Most students who intend to study engineering begin by taking pre-requisite courses in mathematics and physics in the first year. One of the introductory courses ENGS 20 or 21 may be taken in the spring term (COSC 1 and 10 may be taken instead of ENGS 20). However, there are many routes into the major and paths through the major, and students should consult with an engineering professor to develop a course of study that fits their interests.

The following courses are recommended for first-year students (ENGS):

ENGS 20. Introduction to Scientific Computing
This course introduces concepts and techniques for creating computational solutions to problems in engineering and science. The essentials of computer programming are developed using the C and Matlab languages, with the goal of enabling the student to use the computer effectively in subsequent courses.

ENGS 21. Introduction to Engineering
The student is introduced to engineering through participation, as a member of a team, in a complete design project. The synthesis of many fields involving the laws of nature, mathematics, economics, management, and communication is required in the project. Engineering principles of analysis, experimentation, and design are applied to a real problem, from initial concept to final recommendations.

NON MAJOR COURSES

Engineering isn’t just for engineers. The engineering sciences department offers a number of courses that serve in satisfaction of the TAS distributive requirement and/or are complementary to studies in other disciplines. Even if you’ve never picked up a hammer or a drill, our faculty and staff are committed to helping all students get comfortable with the creation process, beginning to end. You’ll discover engineering’s power to improve the world. You’ll gain problem-solving skills useful in all areas of education and life. You may even decide to become an engineer. Ideal for non-majors and first-year students exploring engineering, these courses have few or no prerequisites.

ENGS 12. Design Thinking
This course is lays the foundation for the cognitive strategies and methodologies that form the basis of creative design practice. Design thinking applies to innovation across the built environment, including the design of products, services, interactive technology, environments, and experiences.

ENGS 13. Virtual Medicine and Cybercare
This course will cover topics related to the virtual human, created from bits. This will include virtual reality, augmented reality and data fusion, computer simulation, advanced 3D and 4D imaging techniques, the operating room of the future, minimally invasive surgery, space medicine, tele-operations, tele-medicine and tele-surgery, Internet 2 and cyberspace, artificial intelligence and intelligent agents applied to medicine, and the National Library of Medicine virtual human project.

FOREIGN STUDY

Engineering students may pursue study abroad through Dartmouth’s Guarini Institute for International Education.

In addition, we offer four exchange programs designed especially for engineering majors: one with Thailand’s Chulalongkorn University (or “Chula”), located in the center of Bangkok, another with The Chinese University of Hong Kong (CUHK), a third with the Technical University of Denmark (DTU) in Copenhagen, and a fourth, most recently added, with New Zealand’s largest university, the University of Auckland. Every other year, we partner with the German Department to offer the Green City: Sustainable Engineering Foreign Study Program in Berlin, Germany.

DARTMOUTH EMERGING ENGINEERS (DEE)

The purpose of the DEE program is to improve the first-year experience of students entering Dartmouth with an interest in engineering. As part of the program we provide support and mentoring to these students in order to ensure they gain a solid academic foundation prior to beginning engineering courses. Free group study sessions. Visit https://engineering.dartmouth.edu/dee/ for schedule.

FIRST YEAR RESEARCH IN ENGINEERING EXPERIENCE (FYREE)

The First-Year Research in Engineering program provides research opportunities for first year undergraduate students and provides prospective engineering majors with early hands-on experience and mentoring within engineering. Up to 12 two-term research projects will be available to first-year students who want to participate in engineering research projects. Applications are due in fall term.

English (ENGL) and Creative Writing (CRWT)

The Dartmouth College Department of English and Creative Writing offers courses ranging across a thousand years of cultural history, from Beowulf to The Wire. Students in English work with some of the leading scholars and creative writers in the country. They study canonical figures such as William Shakespeare, Jane Austen, and Toni
Morrison and contemporary writers such as Zadie Smith, David Foster Wallace, and Alison Bechdel. They engage with graphic novels, video games, and television drama, and they sometimes even make their own books in Dartmouth's unique Book Arts Workshop.

The Department is also home to Dartmouth's Creative Writing Program. Students can practice the crafts of fiction, poetry, creative nonfiction, and more with our faculty of renowned writers. The Writing Workshops are small, intimate, and intense—ideal both for aspiring writers and for those who want to complement their critical studies with creative investigation.

All department courses pay close attention to the language and structure of texts, the production of original creative and/or scholarly work, the development of critical vocabularies and theoretical models, and the cultural circumstances of textual production.

The following English courses are recommended for first-year students:

**ENGL 1. Literary History I: Literature Up to the Mid-17th Century**
**ENGL 2. Literary History II: Mid 17th to the 19th Century**
**ENGL 3. Literary History III: Literature in the 20th and 21st Centuries**
**ENGL 10. Old English and Scandinavian Epic and Saga ENGL 15. Shakespeare**
**ENGL 23. Romantic Literature: Aesthetics and Ideology from the French Revolution to Frankenstein**
**ENGL 29. American Fiction to 1900**
**ENGL 30/AAS 34. Early Black American Literature**
**ENGL 34. From "Anna Christie" to "Hamilton" (and Donald Trump): Modern American Drama**
**ENGL 45. Introduction to Literary Theory**

The following Creative Writing courses are recommended for first-year students:

**CRWT 10. Reading and Writing Fiction**
**CRWT 11. Reading and Writing Creative Nonfiction**
**CRWT 12. Writing and Reading Poetry**

An introductory workshop and reading course in poetry, designed to have students consider different aspects of writing and the various elements integral to the genre.

**ENGL 1. Literary History I:**
Literature up to the mid-seventeenth century. An overview of English literature from the Anglo-Saxon period through the Middle Ages and into the seventeenth century.

**ENGL 10. Old English and Scandinavian Epic And Saga**
An introduction both to Old English literature and to Old Norse sagas, setting “Beowulf” and poems like “The Wanderer” and “The Wife’s Lament” in their North Sea/North Atlantic context. We will learn just enough Old English to enable us to read, translate, and savor some of the original poetry and to become savvy readers of the modern translations. Sagas will include “Volsunga,” “The Saga of the People of Lazard,” and “Hrolf Kraki” (in translation).

**ENGL 15. Shakespeare**
A study of about ten plays spanning Shakespeare's career, including comedies, histories, tragedies, and romances. Attention will be paid to Shakespeare's language; to his dramatic practices and theatrical milieu; and to the social, political, and philosophical issues raised by the action of the plays. Videotapes will supplement the reading. Exercises in close reading and interpretative papers.

**ENGL 29. American Fiction to 1900**
A survey of the first century of U.S. fiction, this course focuses on historical contexts as well as social and material conditions of the production of narrative as cultural myth. The course is designed to provide an overview of the literary history of the United States novel from the National Period to the threshold of the Modern (1845-1900). To do justice to the range of works under discussion, the lectures will call attention to the heterogeneous cultural contexts out of which these works have emerged as well as the formal and structural components of the different works under discussion. In keeping with this intention, the lecturers include the so-called classic texts in American literature, The Last of the Mohicans, Moby Dick, The Scarlet Letter, The Narrative of the Life of Frederick Douglass, but also the newly canonized Uncle Tom's Cabin, Incidents in the Life of a Slave Girl, Life in the Iron Mills, and Hope Leslie in the hope that the configuration of these works will result in an understanding of the remarkable complexity of United States literary culture.

**ENGL 34. From "Anna Christie" to "Hamilton" (and Donald Trump): Modern American Drama**
In this course we’ll take up iconic plays in modern and contemporary American Drama -- Eugene O’Neill’s Anna Christie and Long Day’s Journey into Night, Arthur Miller’s All My Sons and Death of A Salesman, Lorraine Hansberry’s A Raisin in the Sun, Tennessee Williams’ A Streetcar Named Desire and Cat on a Hot Tin Roof, August Wilson’s Fences, Tony Kushner’s Angels in America, Suzan Lori-Parks’ Topdog/Underdog, Lin-Manuel Miranda’s Hamilton -- and consider the ways in which they were shaped by historical events even as they helped to shape (and in some cases reform) U.S. culture and politics. In the final week, the class will analyze the theatrical design, dramatic structure, and cultural efficacy of a Donald Trump rally.

**ENGL 37. Contemporary American Poetry**
This course explores the most exciting developments in American poetry from 1960 until the present. We will consider a wide array of poetic movements—the Beats, the New York School, the Confessionals, the Black Mountain group, the Black Arts Movement, Language poets, performance and conceptual poetry, rap and spoken word—in order to understand the aesthetic tendencies that inform American poetry being written today. In particular, we will examine key individual poets through close readings of their most exemplary work.

**ENGL 45. Introduction to Literary Theory**
The course will introduce students to some of the Leading texts, concepts, and practices of what has come to be known as theoretical criticism. Topics to be considered may include some of the following: structuralism, deconstruction, psychoanalysis, feminism, new historicism, post-colonialism, post-modernism, queer theory, and cultural studies. Attention will also be given to historical and institutional contexts of this criticism. Intended to provide a basic, historically informed, knowledge of theoretical terms and practices, this course should enable students to read contemporary criticism with understanding and attempt theoretically informed criticism themselves.

**Environmental Studies (ENV)**
Environmental Studies offers interdisciplinary courses that are of interest to students regardless of their major field of study. Our classes examine the biophysical and social issues behind important environmental problems such as global change, air pollution, loss of biodiversity, international environmental policy, and energy resources. Learning about the complexity of these problems is complemented by exploring possible solutions to these problems. Classes are offered on a diversity of topics such as ecological economics, environmental writing, environmental health, biogeochemistry of natural and human-disturbed ecosystems, and ecological agriculture. Students may major in environmental studies or may use environmental studies to modify other majors or complete a minor in either environmental studies, sustainability, or environmental science. A foreign study program is offered in Southern Africa. The program has prerequisites and interested students...
Recommended Courses for First-Year Students

should inquire by the beginning of the sophomore year, or earlier.

CREDIT ON ENTRANCE AND ADVANCED PLACEMENT
Students who have scored a 4 or 5 on the Environmental Science CEEB Advanced Placement Examination will receive credit on entrance for Environmental Studies 2. Credit on entrance appears on the Dartmouth transcript and does not count towards the 35 credits required to graduate.

The following courses are recommended for first-year students (ENVS):

2. Introduction to Environmental Science
3. Environment and Society
12. Energy and the Environment
15. Environmental Issues of the Earth's Cold Regions
17. Marine Policy
18. Indigenous Environmental Studies

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:

2. Introduction to Environmental Science
To understand current environmental problems, we need to study the physical, biological, chemical and social processes that are often the basis of those problems. This course will give the skills necessary to ask intelligent questions about - and perhaps obtain answers to - some of the environmental problems our planet is facing today by examining scientific principles and the application of those principles to environmental issues. This course will survey a variety of topics including pollution, biodiversity, energy use, recycling, land degradation, and human population dynamics. It is designed to introduce environmental science and environmental issues, topics which are explored in greater depth in other Environmental Studies courses.

3. Environment and Society
The relationship between humans and the environment is mediated by the consumption of natural resources, the discharge of pollution and waste, and the transformation of landscapes and ecosystems. Unsustainable outcomes arise because individuals and organizations have incentives to undertake actions that degrade environmental quality, often in the context of markets. As a result, achieving sustainability requires laws, public policies, social norms, and shared understandings that align individual action with collective well-being. This course analyzes the causes and solutions of environmental problems through the integration of concepts from a variety of social science disciplines. In addition, it explores the central role that ecology and ecosystem science play in understanding and responding to sustainability challenges. Dist: SOC.

15. Environmental Issues of the Earth's Cold Regions
This course examines the major physical, ecologi-
As you explore possible majors, consider the many minors available. Look at department websites for details.

language proficiency to satisfy the College’s new language requirement ([https://dartgo.org/lang-req](https://dartgo.org/lang-req)). Students who have tested or placed out of the 1, 2, 3 sequence in French may satisfy the new requirement by taking an LRP course or an intermediate to upper-level course in French, such as French 9 (Exploring French Culture and Language), or French 10 (Introduction to French Literature).

**COURSE PLACEMENT AND EXEMPTION**

The scores of the SAT II Subject Test and the CEEB Advanced Placement Examination will be used as follows:

**Course placement:**
1. A student who receives a score of 0-530 on the SAT II Subject Test will be placed in French 1.
2. A student who receives a score of 540-600 on the SAT II Subject Test will be placed in French 2.
3. A student who receives a score of 610-710 on the SAT II Subject Test or a score of 4 on the AP will be placed in French 3.

The following scores/grades will exempt students from the French 1, 2, 3, sequence:
1. A score of 5 on the CEEB Advanced Placement Examination.
2. A score of 720 or higher on the SAT II Subject Test.
3. A grade of 6 or 7 on the Higher-level International Baccalaureate (IB)
4. A grade of “A” on the British A-Level

**EXEMPTION FROM FRENCH 8: DARTMOUTH’S ADVANCED PROFICIENCY EXAM**

An entering student who has been exempted from French 1, 2, and 3 is eligible to take the Advanced Proficiency Exam (APE) during New Student Orientation in September. A score of 90 percent or more earns exemption from French 8.

Note: French 8 (or exemption) and French 10 (see below) are prerequisites for participation in our Paris program; they are also required courses for all students who major or minor in French.

**TRANSFER CREDIT**

Transfer credit is not granted for French courses taken at other colleges and universities before matriculation at Dartmouth. The Department Chair may authorize exceptions for upper-level French courses for students transferring from another school after their first year. Transfer credit is never granted for French 1, 2 or 3.

**RECOMMENDED FRENCH LANGUAGE SEQUENCE**

1. *French 1 followed by French 2*

*Introductory French I*

The French language in all skill areas: classwork emphasizes listening, speaking, reading and writing. Students learn the basics of French grammar and acquire a broader understanding of French and Francophone culture through materials that enable them to use the language in context.

*Introductory French II*

Builds on skills acquired in French 1. Students deepen their understanding and further their practice of French grammar. A broad variety of assignments improve proficiency in listening, speaking, reading and writing and enhance understanding of French and Francophone culture. OR

2. *French 11 Intensive French (an accelerated course that combines French 1 and 2 in one term)*

This 1-credit course, which combines French 1 and 2 in one term, is designed for students with little or no knowledge of the French language, but who have a strong background in another Romance language (i.e. Spanish, Italian, Romanian, Portuguese, Catalan, and also Latin). French 11 is an accelerated course that combines French 1 and 2 in one term offering an exciting and fast-paced atmosphere to learn French.

3. *Introductory French III*

Given on campus as the final course in the required sequence, this course refines spoken and written language skills by reinforcing grammatical structures and expanding vocabulary. Exposure to a broad spectrum of language styles ranging from colloquial to formal and use of multiple French language sources such as literature, advertising, comics and television. Frequent oral and written assignments with a focus on culture.

**8. Exploring French Culture and Language**

Practice in the active use of the language combined with analysis of key aspects of French society. Students write papers and participate in discussions based on books, articles, and films emphasizing social and historical concepts. Prerequisite: French 3 or equivalent preparation. Dist: SOC; WCult: W.

**10. Introduction to French Literature**

Different variations of the course are offered in each term, but all deal in major figures, themes, or issues of French and Francophone writing. Students learn techniques of critical reading and interpretation. Prerequisite: French 8 (or exemption). Dist: LIT; WCult: W.

**ITALIAN (ITAL)**

Either three, one-term elementary courses (Italian 1, 2, and 3) or two, one-term courses (Italian 11, an accelerated course combining Italian 1 and 2, followed by Italian 3), allow students who enter Dartmouth with little or no language proficiency to satisfy the College’s new language requirement ([https://dartgo.org/lang-req](https://dartgo.org/lang-req)). Students who have tested or placed out of the 1, 2, 3 sequence in Italian may satisfy the new requirement by taking an LRP course or an intermediate to upper-level course in Italian, such as Italian 9 (Italian Culture) and Italian 10 (Introduction to Italian Literature). Students interested in seeking Advanced Placement in Italian should inquire with the Language Program Director, Prof. Tania Convertini: tania.convertini@dartmouth.edu

**COURSE PLACEMENT AND EXEMPTION**

The scores of the SAT II Subject Test and the CEEB Advanced Placement Examination will be used as follows:

**Course placement:**
1. A student who receives a score of 0-530 on the SAT II subject test will be placed in Italian 1.
2. A student who receives a score of 540-600 on the SAT II subject test or a score of 4 on the AP will be placed in Italian 2.
3. A student who receives a score of 610-710 on the SAT II subject test or a score of 4 on the AP will be placed in Italian 3.

The following scores/grades will exempt students from the Italian 1, 2, 3, sequence:
1. A score of 5 on the CEEB Advanced Placement Examination.
2. A score of 720 or higher on the SAT II subject test.
3. A grade of 6 or 7 on the Higher-level International Baccalaureate (IB)
4. A grade of “A” on the British A-Level

**EXEMPTION FROM ITALIAN 1, 2, 3: DARTMOUTH’S ADVANCED PROFICIENCY EXAM**

An entering student who has been exempted from Italian 1, 2, and 3 is eligible to take the Advanced Proficiency Exam (APE) during New Student Orientation in September. A score of 90 percent or more earns exemption from Italian 8.

Note: Italian 8 (or exemption) and Italian 10 (see below) are prerequisites for participation in our Paris program; they are also required courses for all students who major or minor in Italian.

**TRANSFER CREDIT**

Transfer credit is not granted for Italian courses taken at other colleges and universities before matriculation at Dartmouth. The Department Chair may authorize exceptions for upper-level Italian courses for students transferring from another school after their first year. Transfer credit is never granted for Italian 1, 2, or 3.
Recommended Courses for First-Year Students

**RECOMMENDED ITALIAN LANGUAGE SEQUENCE (ITAL)**

Based on your incoming placement and prior language study background, one or more of our courses in the following sequence (Italian 1 followed by Italian 2 and 3 OR Italian 11 and Italian 3)

**Introductory Italian 1**

The Italian language in all skill areas: classwork emphasizes listening, speaking, reading and writing. Students learn the basics of Italian grammar and acquire a broader understanding of Italian culture through materials that enable them to use the language in context.

**Introductory Italian 2**

Builds on skills acquired in Italian I. Students deepen their understanding and further their practice of Italian grammar. A broad variety of assignments improve proficiency in listening, speaking, reading and writing and enhance understanding of Italian culture.

**Italian 11. Intensive Italian for speakers of other Romance Languages (an accelerated course that combines Italian 1 and 2)**

This 1-credit course, which combines Italian 1 and 2 in one term, is designed for students with little or no knowledge of the Italian language, who have a strong background in another Romance language (i.e. Spanish, French, Romanian, Portuguese, Catalan, and also Latin). Italian 11 offers an exciting and fast-paced atmosphere to learn Italian.

**Introductory Italian 3**

Refines spoken and written language skills by reinforcing grammatical structures and expanding vocabulary. Exposure to a broad spectrum of language styles ranging from colloquial to formal and use of multiple Italian language sources such as literature, advertising, comics and television. Frequent oral and written assignments with a focus on culture.

**Italian 9. Italian Culture**

In this culturally contextualized advanced grammar course students solidify their active command of Italian, and gain greater understanding of Italy, her people and culture. The course prepares students for future study of Italian language, literature, film, and culture at more advanced levels (Dist: LIT; WCult: W).

**SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:**

**The following courses are recommended for first-year students:**

**Italian 14. Introduction to Italian Culture**

Have you ever wondered what makes people fall in love with Italy? From history, the arts, religion, and gastronomy to science, technology, and “Made in Italy,” Italian culture will come alive in this course as you learn how to critically read and discuss cultural texts and artifacts while also gaining an understanding of the global impact of Italian cultural production across time and space. Expect to be highly engaged through lectures, discussions, and hands-on projects. No prerequisites. Taught in English. (Dist: SOC; WCult: CI)

**FRT 31. How Languages are Learned**

Many approaches to language teaching and learning have been proposed and implemented over time. From learning grammar rules and lists of vocabulary to memorization and practice of correct sentences to natural communication, project work, communicative language teaching, and content-based learning, this course will introduce students to some of the language acquisition research that will help them understand how languages are learned. Taught in English. (Dist: SOC)

**ITAL 33.01 “Into and Beyond Dante’s Inferno.”**

An austere ancient authority, a smitten teenage lover, a prophet, an embalmer, a national icon, an unapologetic heretic, a mercenary, and the only truly great poet to have ever lived: the medieval Italian poet Dante has been called many things in the 700 hundred years since he began writing, and he continues to attract the interest of a wildly diverse group of readers. Our course will focus on his Inferno, attempting to bring Dante’s vision of Hell to life by reconstructing the terrifying landscape and interpreting the complex poetry of a text that continues to resonate with modern audiences as intensely as it did with its medieval public. Taught in English. (Dist: LIT)

**Geography (GEOG)**

Geographers study the material and symbolic transformation of the earth in relation to both human and natural processes. In keeping with contemporary global cultural, political, economic and environmental shifts in culture, the boundaries of the geographic discipline are dynamic. Central topics of study include, for example, international development, globalization, climate change, immigration and new spatial technologies.

**Selected courses that explore this department or program:**

1. **01. The Natural Environment**

Our natural environment results from an array of climatic, biogeographic, and other physical processes that have changed dramatically over time in response to natural and human-induced disturbance. This course begins by presenting the fundamentals of atmospheric processes; then examines the physical controls on the resulting global pattern of landforms, soils, and vegetation biomes across spatial and temporal scales; and ultimately explains the form and pattern of the earth’s physical geography. Emphasis is also placed on demonstrating the role of human disturbance on these natural processes through shifts in global climate, land use, deforestation and other anthropogenic mechanisms. The media of presentation will be lecture and both field and laboratory exercises. Dist: SLA.

2. **01. Introduction to Human Geography**

The purpose of this course is to provide an understanding of how human societies organize their geographic space and why certain patterns emerge in the resulting human landscape. Principles of location, place, territoriality and geopolitics, migration, gender, economic change, and power are used to examine the geographic distribution of human activity. Geographic comparisons are drawn between North and South, and on global, regional, and local issues. Dist: SOC or INT; WCult: CI.

3. **01. Introduction to Nature-Society Relations**

This course introduces students to the multiple...
Ways that humans interact with environmental Processes at local, regional, national, and global scales. Drawing on a series of cases from Africa, North America, the Middle East, and elsewhere, The course investigates the political economic, Cultural and ideological practices that drive Ecological transformations. Dist: SOC or INT; WCult: NW.

4.01 Global Poverty & Care

This course explores causes and patterns of global poverty and links this with the urgent need for care and care ethics in our lives and in society broadly. We will focus particularly on how care work is devalued and globalized through international flows of care that contribute to global inequality. Through our analysis of global interconnections we will think about our responsibilities to care for those who are near and those who are across the globe. Dist: INT or SOC.

4.02 Introduction to Geospatial Thinking

This course is an introductory survey into key concepts of geographical thought (e.g., place, space, and territory) and their interconnection with a range of geospatial tools and techniques (from paper maps to global positioning systems). By developing geospatial thinking, students will enrich their understanding of spatial data and technologies through concepts and debates in the field of geography. Conversely, command of geospatial tools and techniques will help integrate their use with other types of knowledge.

6.01 Urban Geography

This course examines the historical, cultural, and socio-economic geographies of cities. We begin by tracing the process of urban development from its inception over 5,000 years ago, to industrial modern cities, to postmodern urban forms, using case studies to illuminate certain key features and processes. We then focus on understanding the particular dynamics that shape cities today. Examples are widely drawn but particular attention will be given to American urban patterns and processes. Dist: SOC.

8.01 Introduction to International Development (Identical to International Studies 16)

Why are some countries rich and others so persistently poor? What can and should be done about this global inequality and by whom? We address these development questions from the perspective of critical human geography. Focusing on the regions of Latin America, Africa and Asia, we examine how development meanings and practices have varied over time and place, and how they have been influenced by the colonial history, contemporary globalization, and international aid organizations. Dist: SOC or INT; WCult: NW.

9.01 Geographical Information Systems

Geographical information systems (GIS) are computer-based systems that process and answer questions about spatial data relative to concerns of a geographic nature. This course focuses on the basic principles of GIS, including data capture and manipulation, methods of spatial interpolation, and GIS trends and applications. The course is not intended to train students to be GIS operators; rather, to explain the fundamentals of this rapidly growing technology. Dist: TL.

German (GERM)

The Department of German Studies introduces students to the language, literature, cinema, art, music, culture, and philosophy of Germany, Austria, and Switzerland. Its off-campus programs take place in the endlessly fascinating city of Berlin, and its students frequently win internships and prestigious fellowships that enable them to pursue individual interests there and elsewhere in the German-speaking world. Its students also often go on to highly successful careers in professional fields such as business, law, medicine, education, engineering, and diplomacy.

The Department welcomes students of all levels of proficiency, including those who have never learned German. Its elementary courses (German 1, 2, and 3) offer intensive training in hearing, speaking, reading, and writing the language. Intermediate courses (German 10.00, 10.01, 10.02, etc.) explore German culture while reinforcing grammar and expanding vocabulary. Courses taught in English (German 13-15 and 42-47) and advanced seminars (German 61-84) address a variety of specific literary and other topics.

TRANSFER CREDIT

Transfer credit is not granted for German courses taken at other colleges and/or universities before matriculation at Dartmouth. The departmental chair may authorize exceptions.

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:

German 1

Introduction to written and spoken German. Immersive study of German language and culture in a diverse German speaking world with a focus on basic grammar and vocabulary through fictional and non-fictional readings, film, oral and written drills, composition exercises, authentic conversation, and project work.

German 2

Continued work on written and spoken German. Immersive study of German language and culture in a diverse German speaking world with a focus on basic grammar and vocabulary through fictional and non-fictional readings, film, oral and written drills, composition exercises, authentic conversation, and project work.

German 3

Continued work on written and spoken German. Immersive study of German language and culture in a diverse German speaking world with a focus on basic grammar and vocabulary through fictional and non-fictional readings, film, oral and written drills, composition exercises, authentic conversation, and project work.

10.01 Intermediate German Language and Culture: To Be Young and German

Investigates youth cultures in the German-speaking world, analyzing different ideas of youth and their political and cultural impact in four distinct units: fairy tales and nation building in the early nineteenth century; sexual awakening in the early twentieth century; authoritarian regimes of the mid- and late twentieth century; youth rebellion in post-war and post-unification Germany. Dist: SOC; WCult: CI.

CREDIT ON ENTRANCE AND ADVANCED PLACEMENT

Students who score 720 or higher on the SAT II German test or who score 5 on the CEEB Advanced Placement Examination in German place into any of the Department’s intermediate courses (10.00, 10.01, 10.02, etc.). Students who score 4 on the AP exam are placed into German 3. Students who have studied German but not taken the SAT II test or the AP Exam in German or who score less than 4 on the latter should take the departmental placement exam online (https://german.dartmouth.edu/undergraduate/placement-test).

Government (GOVT)

Political science is a highly diverse field united around a core interest. Political scientists study power, especially power used for public purposes: how it is created, organized, distributed, justified, used, resisted, and sometimes destroyed. American political science is traditionally divided into four subfields: American politics, comparative politics, international relations, and political theory and public law. Students may choose to focus on one of these subfields or may select courses according to some other intellectual plan.

The prerequisite to the major is one course in statistics and the methods of social science—either Government 10, Economics 10 or Math 10. A standard government major comprises at
Recommended Courses for First-Year Students

least 10 courses (beyond the prerequisite) chosen to constitute an intellectually coherent program. These courses should include two introductory courses, six additional courses at any level, an advanced seminar or the honors program as the senior culminating experience, and an additional advanced seminar. The minor in government consists of two introductory courses, four upper-level courses (Government 10 may count as one of the upper-level courses), and one advanced seminar, chosen to constitute an intellectually coherent program.

The following courses are recommended for first-year students (GOVT):
3. The American Political System
4. Politics of the World
5. International Politics
6. Political Ideas
10. Quantitative Political Analysis. Recommended after students have completed at least 1 introductory course

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:
3. The American Political System

An examination of the American political process as manifested in voting behavior, parties and their nominating conventions, interest groups, the Presidency, Congress, and the Judiciary. Special emphasis is placed on providing students with a theoretical framework for evaluating the system including discussions of decision-making, bargaining, and democratic control. Dist: SOC; WCult: W.

4. Politics of the World

This course examines democracy and dictatorship, revolutions and social movements, political development, and the nature of political regimes and institutions around the world. Students learn how political decisions are reached, how actors are mobilized, and whether and how authority can be exercised without being abused in a wide variety of political settings. Dist: SOC or INT.

5. International Politics

This course introduces the systematic analysis of international society, the factors that motivate foreign policies, and instruments used in the conduct of international relations. Particular attention is given to power and economic relations; to cultural differences that may inhibit mutual understanding or lead to conflict; to nationalism and other ideologies; to the requisites and limits of cooperation; and to the historical structuring and functioning of international institutions. Dist: SOC or INT.

6. Political Ideas

The course is designed to introduce students to political philosophy. It opens with the classic contrast between Plato and Machiavelli concerning the problems of justice and power. The course then examines several basic positions in the development of modern political philosophy—liberalism, socialism, and conservatism. Among the individual thinkers considered as representative of these positions are Locke, J. S. Mill, Rousseau, Marx, and Burke. Dist: TMV.

10. Quantitative Political Analysis
(recommended after students have completed at least 1 introductory course). This course will provide students with useful tools for undertaking empirical research in political science and will help them to become informed consumers of quantitative political analysis. The course will first consider the general theoretical concepts underlying empirical research, including the nature of causality, the structure and content of theories, and the formulation and testing of competing hypotheses. The course will then employ these concepts to develop several quantitative approaches to political analysis. Students will be introduced to two statistical methods frequently used by political scientists: contingency tables and linear regression. By learning to systematically analyze political data, students will gain the ability to better conduct and evaluate empirical research in both its quantitative and qualitative forms. Dist: QDS.

Greeks
(See program description under Classics.)

Hebrew
(See program description under Middle Eastern Studies.)

History (HIST)
The Department of History offers a major, a modified major, a minor, and, for outstanding students, a senior-year honors thesis program. Courses in the history department seek to explore all aspects of the human experience of the past. It is impossible to understand today’s world without studying how people lived in the past. This process of exploring peoples, times, events, and places different from our own requires creativity, determination, and ingenuity. By studying history, we grasp that there is nothing “natural” or “inevitable” about our lives; they are the product of past generations’ choices, experiences, and challenges.

A student can begin study in the department with either an introductory or upper-level course. The introductory level courses (numbered History 1 – 9) are good entry points. First-year students can also enroll in upper-level courses (numbered History 10 – 94), which often demand greater amounts of reading and research, and more advanced writing proficiency and intellectual sophistication.

The history department sponsors a Foreign Study Program to London each fall. Prerequisites are also open to all students with few or no prerequisites. Consult the course catalog (a.k.a. the ORC) or visit the department’s website for a complete list of departmental offerings.

2. #EverythingHasAHistory#: Understanding History Today
This introductory course will explore the historical roots of current events in the United States. This course demonstrates how history is woven into the fabric of our everyday lives and why understanding history is important for understanding the present and navigating the future. We will focus on case studies—such as immigration and borders, computers and society, and race and whiteness—and expect the syllabus to evolve in real time depending on what is in the news during the quarter. This class serves as an introductory course for History majors but is open to all students.

4.03 Introduction to the Modern Middle East and North Africa
The diverse nations and peoples that make up the Middle East and North Africa are of major significance in our contemporary world, at the same time that they are often misunderstood or given only superficial (albeit spectacular) popular attention. This lecture course is designed to give students a nuanced introductory overview of the modern histories of this region. Students will read a variety of primary and secondary materials designed to familiarize them with the historical, cultural, and social processes that have affected and transformed the region in question and will learn to put these regional histories in a global framework.

5.04 Introduction to Korean Culture
This course provides an introduction to Korean culture and history, examining Korea’s visual and textual expressions from the pre-modern age to the twentieth century. What are the origins of Korean national and cultural identities? How have Korean claims of cultural distinctiveness been manifested and modified over time? Tracing answers to these questions simultaneously helps us to consider how and why Korea has entered America’s consciousness. As Korean matters to the US not simply as a fact but as a project, this course avoids portraying Korea through any generalized statements or uncritical categories. Rather, students are encouraged to explore and perspectives on Korea and thereby unravel their
own prejudices and agendas. No prior acquaintance with the Korean language is required.

5.05 The Emergence of Modern Japan
A survey of Japanese history from the mid-nineteenth century to the present. Topics to be covered include the building of a modern state and the growth of political opposition, industrialization and its social consequences, the rise and fall of the Japanese colonial empire, and the postwar economic ‘miracle.’

5.13 Introduction to Modern Latin America
This course presents the histories of Latin American and Caribbean societies, peoples, and nations from the onset of the Haitian Revolution in 1791 to the present. By placing Haiti at the center of the Age of Revolutions, this course also locates the Caribbean region within the Latin American context. We will study the region’s nation-building processes using an intersectional lens to explore how different people interpreted them through their own gendered, classed, and racialized identities.

5.14 The Americas from Invasion to Independence
The course explores the history of the Americas as space of conflict, colonialism, and political and economic change over three centuries from the arrival of Europeans to the revolutions that separated new American nations from European control. Using a thematic approach, the course will compare areas of the hemisphere and rival European imperial projects, while also identifying critical connections and interdependencies across the Americas. Students will be introduced to key questions in early American history and also to the analysis of primary and secondary sources through lectures and small discussion groups.

Humanities 1 and 2 (HUM)
Humanities 1 (Fall term, Dialogues with the Classics) and Humanities 2 (Winter term, ‘The Modern Labyrinth) form a two-term sequence that introduces first-year students to the subject matter and intellectual perspectives of the humanities. Students engage with professors and each other in small and intense discussion sections and meet with professors for individual writing conferences. Faculty from a range of humanities departments (e.g., English, Theater, Philosophy, Religion, Music, French) also lecture from week to week on texts from many historical periods, national traditions, and literary genres.

Humanities 1 and 2 draw students who love reading, who enjoy immersing themselves in works of art that have profoundly influenced human culture from the ancient world onwards, and who are not daunted by intellectual challenge. The Humanities sequence lays an excellent foundation for further study in departments across the humanities and social sciences, from Anthropology to Classical Studies and from Art History to Government.

Completing Humanities 1 satisfies the Writing 5 requirement; completing Humanities 2 fulfills the First-Year Seminar requirement. Students accepted into the sequence may take either or both courses.

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:
1. Dialogues with the Classics
Through a selection of compelling books and artworks from antiquity to the present, the course introduces students to key moments and ideas in global, especially Western, culture. The interpretative approaches taken to these works, and the connections drawn between them, will prepare students for further study in Dartmouth courses rooted in the humanities and social sciences. Readings have recently included texts by Augustine, Borges, Octavia Butler, Césaire, Claire Denis, Homer, Lu Yao and Voltaire, as well as units on Enlightenment-era painting, Baroque sculpture, and the twentieth-century musical.

International Studies (INTS)
The Dickey Center offers an interdisciplinary minor in international studies that allows Dartmouth students, regardless of major, to become educated in the cross-cutting global forces that shape the vital issues of our day. These issues—environmental change, global health, global inequality, terrorism and violence—transcend boundaries by their very nature, and as such cannot be understood from a single disciplinary perspective. At the same time, a strong disciplinary grounding is essential for providing a rigorous training and relevant bodies of knowledge to ascertain facts and understand values.

The international studies minor aims to make students cognizant of the interplay between local and global processes, human and environmental interactions, and places, identities and culture, and to prepare them to live productive, responsible lives in an interconnected and rapidly changing world.

Please visit the Dickey Center’s website for more information about the minor and a complete listing of courses: https://dickey.dartmouth.edu/programs/global-studies/international-studies-minor

The six-course sequence for the minor includes four multidisciplinary courses, one advanced language course, and one elective course of international scope. None of the international studies courses have prerequisite requirements, and all are open to first-year students for enrollment.

The following courses are recommended for first-year students (INTS):
15. Violence & Security
16. Introduction to International Development
17. Cultures, Places, & Identities
18. Global Health & Society

Italian
(See program description under French and Italian.)

Japanese
(See program description under Asian Societies, Cultures, and Languages.)

Jewish Studies (JWST)
The Jewish Studies Program serves to provide a focal point for the various courses in Jewish religion, literature, history, society and culture that are given at Dartmouth as well as to sponsor special course offerings and a variety of academic activities related to the discipline. The Jewish Studies Program is interdisciplinary, and all of our courses are cross listed with other departments and programs. We currently offer a minor in JWST and a major is possible by special request.* In the Jewish Studies Program higher course numbers don’t indicate advanced courses; first year students are welcome to take the higher number courses.

The following courses are recommended for first-year students:
06. Introduction to Judaism
11. History and Culture of the Jews II: The Modern Period
11.02 History and Culture of Arab Jews
13. Jews and Race
15. Judaism and the Environment
Recommended Courses for First-Year Students

### SELECTED FALL COURSES (JWST)

#### 06. Introduction to Judaism
This course offers an introduction to Judaism by examining three of its central spiritual manifestations: (1) development, observance, and study of the Halakah (religious law); (2) philosophical contemplation; and (3) mystical experience and theosophical speculation. Ancient and modern challenges to the tradition will be studied in some detail, and an attempt will be made to determine what might constitute a unity of such a diverse tradition. Open to all classes.

#### 11. History and Culture of the Jews II: The Modern Period
A continuation of JWST 10, but may be taken independently. This course provides a survey of Jewish history and culture from the European enlightenment to the establishment of the State of Israel.

#### 11.02 History and Culture of Arab Jews
This course examines the history, social characteristics, and cultural identity of the Arab Jews. One of the goals of the course is to examine the question “who is an Arab Jew?” What perceptions and definitions relate to the differences between Sephardi, Mizrahi, and Arab Jews? What is Arab Jewish history and what is its place in Jewish, Middle Eastern, and Israeli historiography? An examination of these questions requires an understanding of the history of the Arab Jews in different periods and different geographical and cultural spaces, against the background of transitions in imperial, colonial, and national rule.

#### 13. Jews and Race
The question of Jewish difference has been foundational in the formation of both Christendom and Islam. Of course, the question of race, and the racialization of the Jews, is often thought to be modern phenomenon when Race Science became prominent in the nineteenth century. But lately scholars have begun to rethink the category of race in connection with modernity and to reconsider race as a construct that extends back at least into the Middle Ages.

#### 15. Judaism and Ecology
Tracking between ancient, medieval and modern texts, we will consider the rise of Jewish “environmentalism” in the late 19th and 20th centuries, both as theory and practice, and the changing place in Judaism and Jewish life of themes such as agriculture, animals, nature, pantheism and anthropocentrism. The course offers a window into central but often marginalized aspects of Judaism and Jewish culture and society as they changed over the centuries; familiarity with some of Judaism’s major texts; a survey of some vital features of contemporary Jewish life and Jewishness.

</thead>
<tbody>
<tr>
<td>26. European Jewish Intellectuals</td>
<td>The course will examine the role of the Jewish intellectual in twentieth-century Europe. We shall focus on several paradigmatic figures (Arendt, Benjamin, Adorno, Levinas, Derrida) who confront the redefinition of politics and civil society in modern times. Some attempt to deal with these changes through a critical reflection on the concepts of democracy and ethics and on how justice can be practiced either within or outside of the geographical and spiritual boundaries of the modern nation state. We shall examine how Jewish self-consciousness and a deep attachment to biblical tradition enables these intellectuals to reconcile ethical imperative with political realities. Particular attention will be paid to topics such as the challenges of Eurocentric Christian humanism and universalism to Jewish assimilation; the promises of totalitarianism, Marxism and messianism; the politics of biblical exegesis; history and Jewish mysticism; Zionism, anti-Zionism and the Arab-Israeli conflict.</td>
</tr>
<tr>
<td>40.01 Politics of Israel and Palestine</td>
<td>This course explores the century-old conflict as seen from the political structures and changing narratives of Israelis and Palestinians, including the Zionist movement and the responses of the Palestinian Arab community to it; the formation of the Arab national movement as a whole—and within this, the claims of Palestinians before and after the British Mandate; the founding of the state of Israel and the formation of the post-1948 Palestinian national movement; the aftermath of the 1967 war; the start of the Israeli occupation and the latter’s impact on Israeli institutions, economy, and political parties; and the Palestine Liberation Organization and the founding of Hamas. We will explore contemporary political and economic developments in light of the global forces operating on the region, and consider the plausibility of a two-state solution.</td>
</tr>
<tr>
<td>40.01 Politics of Israel and Palestine</td>
<td>LALACS is an interdisciplinary department that offers courses in the social sciences and humanities on Latin America, Latinos in the United States. The course will address the history of ethnic communities and what might constitute a unity of such a diverse tradition. Open to all classes.</td>
</tr>
<tr>
<td>LATS 3. Latinx Lives in the US</td>
<td>This course focuses on the histories and experiences of Latinx transnational migrants—from Mexico, Central America, Puerto Rico, the Dominican Republic, and Cuba—living in the United States.</td>
</tr>
<tr>
<td>Latin</td>
<td>(See program description under Classics.)</td>
</tr>
<tr>
<td>Linguistics (LING)</td>
<td>Linguistics is the scientific study of human language. Linguists investigate essential aspects of languages’ sounds and sound systems, their word and sentence structures, meaning, sociocultural contexts for language use, and language change. Students majoring in linguistics take most of their courses within the department, though there are relevant courses in other departments and programs.</td>
</tr>
<tr>
<td>Linguistics 1</td>
<td>taught each fall, winter, and spring, offers an introductory description of human language and its use; this course serves as a prerequisite for subsequent study in linguistics.</td>
</tr>
</tbody>
</table>

### SELECTED COURSES THAT EXPLORE THIS DEPARTMENT

#### LACS 1. Introduction to Latin America and the Caribbean
This interdisciplinary course introduces students to the geographical conditions, historical roots, and enduring cultural diversity of Latin America and the Caribbean. The course draws on these historical and anthropological understandings to assess recent economic, social, and political developments in Latin America.

#### LACS 24.5 Latsploitation
Latinx audiences have long been an interest and target of the Hollywood studios. Applying theories of racialized spectatorship and performance and film genre and authorship, we will interrogate this historically troubled relationship and grapple with its consequences for Latinx representation and inclusion in American cinema.

#### LATS 3. Latinx Lives in the US
The course will address the history of ethnic communities, the formation of transnational communities and identities; race, class, and ethnicity; gender and sexuality; political and social movements; geographic space and localities; and media and popular culture. Course materials will draw from the social sciences and the humanities, as well as from U.S. and Latin American scholarship and cultural traditions.

#### LATS 44. Crossing Over
This course focuses on the histories and experiences of Latinx transnational migrants—from Mexico, Central America, Puerto Rico, the Dominican Republic, and Cuba—living in the United States.

#### Latin
(See program description under Classics.)

#### Linguistics (LING)
Linguistics is the scientific study of human language. Linguists investigate essential aspects of languages’ sounds and sound systems, their word and sentence structures, meaning, sociocultural contexts for language use, and language change. Students majoring in linguistics take most of their courses within the department, though there are relevant courses in other departments and programs.

Linguistics 1, taught each fall, winter, and spring, offers an introductory description of human language and its use; this course serves as a prerequisite for subsequent study in linguistics.

Are there academic departments that are not represented in your course choices? Why do you think that is the case?

11.17 Language Acquisition

17. Sociolinguistics

18. History of the English Language

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:

1. Introductory Linguistics
   An introduction to the scientific description of human language. The course teaches methods of analyzing languages’ sound systems (phonology), word structure (morphology), sentence patterns (syntax), and systems of meaning (semantics and pragmatics). Some important implications of linguistics for the study of human cognition and cultural behavior will be discussed. Dist: QDS.

LING 11.10 / AAAS 87.11 Language in Africa
   Africa: home to around 2000 of the world’s 7000 languages, yet ask an average person on the street to name five African languages and they may be hard-pressed to do so. This course explores the languages of Africa from a historical, linguistic, and cultural standpoint, including the migration and diffusion of different language groups across the continent, similarities and differences in linguistic structure between African languages, the amazing complexity of the Khoisan languages (best known for their use of clicks), the effects of colonialism on language, writing systems, and many other topics. Dist: SOC, WCult: NW.

11.17 Language Acquisition

Language is a socially and cognitively complex activity, yet most healthy individuals acquire language in the first years of their life with no expended effort. This course provides an in-depth overview of typical language development from fetus to adult, as well as atypical development. The study of this topic within this course is informed by cognitive science, speech and hearing, psychology, philosophy, and neurology; and is ultimately couched in linguistics framework and terminology. Dist: SOC.

17. Sociolinguistics

The field of sociolinguistics deals with the ways in which language serves to define and maintain group identity and social relationships among speakers. In this course we will consider such topics as regional and social variation in language; the relationship of language and ethnicity, sex and gender; language and social context; pidgin and creole languages; language endangerment and the fate of minority languages in the US and other countries; language planning, multiculturalism and education. Open to all classes. Dist: SOC; WCult: CI.

18. History of the English Language

This course traces the development of English as a spoken and written language belonging to the Indo-European language family. We will work forward from Proto-Indo-European through Old English (Beowulf), Middle English (Chaucer), and Early Modern English (Shakespeare), up to contemporary American English. Our focus will be on the structural history of the language, especially changes in pronunciation and grammar, and the implications of those changes for English as spoken and written today. Open to all classes. Dist: QDS; WCult: W.

Mathematics (MATH)

The Department of Mathematics offers a wide variety of courses for interested students. Many (but not all) students begin their study of mathematics at Dartmouth by taking a Calculus course appropriate to their preparation.

Students who have seen some aspects of Calculus before are placed in Mathematics 3 by default (but see the section on Credit and Advanced Placement below). Students who have not had the opportunity to take Calculus before coming to Dartmouth are recommended to take Mathematics 1, which is an introduction to Calculus that reviews appropriate pre-calculus material. To place into Mathematics 1 students need to take the Mathematics 1 Placement Exam on Canvas (see below). Normally, no student who has completed any portion of a Calculus course before matriculation would take Mathematics 1.

Students completing Mathematics 1 who wish to continue the Calculus sequence continue in Mathematics 3, where they revisit some of the core topics in Mathematics 1 in more depth while applying them in new ways.

Students with concerns or confusion about their placement should consult the Math Placement System and/or the First-Year Advisor for Mathematics.

The following courses are recommended for first-year students (MATH):

1. Introduction to Calculus
2. Calculus
3. First-Year Seminar
4. Calculus of Functions of One and Several Variables
5. Multivariable Calculus with Linear Algebra
6. Introduction to Statistics
7. Accelerated Multivariable Calculus
8. Multivariable Calculus
9. Accelerated Calculus
10. An Introduction to Mathematics Beyond Calculus
11. Discrete Probability
12. Linear Algebra
13. Differential Equations
14. Linear Algebra (Honors Section of Mathematics 22)
15. Introduction to Combinatorics

CREDIT AND ADVANCED PLACEMENT

Qualified students may receive credit on entrance for one or two terms of calculus (Mathematics 3 and 8) with advanced placement into a higher course. In awarding credit on entrance and advanced placement, the Department of Mathematics bases its decisions on results of the CEEB Advanced Placement examinations and/or a departmental test given at Dartmouth (see our Math Placement System on Canvas). Students with exceptional preparation should contact the mathematics department prior to or during New Student Orientation.

The Mathematics 3 syllabus is similar to that of high school AB calculus. However, the sequel, Mathematics 8, is quite different from the BC calculus course: the first half corresponds to BC topics but the second half covers multivariable calculus. To better place students with BC experience, we offer Mathematics 11, which covers all of multivariable calculus. A student who receives a score of 4 or 5 on the CEEB Advanced Placement Examination for Calculus BC receives credit for Mathematics 3 and 8 and is placed into Mathematics 9 or 11. In this case, completing Mathematics 11, or 9 and 13 finishes the calculus sequence. A student who receives a score of 4 or 5 on the CEEB Advanced Placement Examination for Calculus AB receives credit for Mathematics 3 and 8 and is placed into Mathematics 11. Math 11 fulfills the requirement for the BC subscore of a BC exam, receives credit for Mathematics 3 and is placed into Mathematics 8.

For students who think they may be qualified for Advanced Placement in mathematics, but who
Recommended Courses for First-Year Students

did not take either CEEB Advanced Placement Examination, or who feel their CEEB scores do not reflect their current qualifications, we offer local placement and credit exams. Students who scored a 3 on the AB exam or the AB Subscore are particularly encouraged to take the local department exam for credit in Mathematics 3. Students who scored a 3 on the BC exam may wish to take the local department exam for credit in Mathematics 8. All students are encouraged to review their calculus before the examination. Students who have advanced credit for Mathematics 3 but do not have additional credit and wish to continue the calculus sequence typically begin with Mathematics 8.

At the end of Mathematics 8, the student may elect to take Mathematics 13 (Calculus of Vector Valued Functions) or any other course (e.g., 20, 22) for which Mathematics 8 is the sole prerequisite. Students with advanced credit for Mathematics 3 and who receive credit for Mathematics 8 based on the local placement exam, and wishing to continue with the calculus sequence are placed in Mathematics 11 in the fall. The most commonly chosen subsequent courses are Mathematics 24 (Honors Linear Algebra) in the winter, Mathematics 22 (Linear Algebra) in the spring, and/or Mathematics 23 (Differential Equations) in the winter or spring.

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:

1. Introduction to Calculus
This course is an introduction to single variable calculus for students who have not taken calculus before. Students who have seen some calculus, but not enough to place out of MATH 3, should take MATH 3. MATH 1 reviews relevant techniques from algebra and pre-calculus, covers the manipulation and analysis of functions, including polynomial, trigonometric, logarithmic, and exponential functions, an introduction to convergence and limits, continuity, rates of change and derivatives, differentiation rules, and applications to approximation. Students wishing to continue their study of calculus after MATH 1 take MATH 3. Dist: QDS.

3. Calculus
This course is an introduction to single variable calculus aimed at students who have seen some calculus before, either before matriculation or in MATH 1. MATH 3 begins by revisiting the core topics in MATH 1—convergence, limits, and derivatives—in greater depth before moving to applications of differentiation such as related rates, finding extreme values, and optimization. The course then turns to integration theory, introducing the integral via Riemann sums, the fundamental theorem of calculus, and basic techniques of integration. Dist: QDS.

8. Calculus of Functions of One and Several Variables
This course is a sequel to Mathematics 3 and is also appropriate for students who have successfully completed an AB calculus curriculum (or the equivalent) in secondary school. Roughly half of the course is devoted to topics in one-variable calculus, selected from techniques of integrations, areas, volumes, numerical integration, sequences and series including Taylor series, ordinary differential equations and techniques of their solution. The second half of the course studies scalar valued functions of several variables. It begins with the study of vector geometry, equations of lines and planes, and space curves (velocity, acceleration, arclength). The balance of the course is devoted to studying differential calculus of functions of several variables. Topics include limits and continuity, partial derivatives, tangent planes and differentials, the Chain Rule, directional derivatives and applications, and optimization problems including the use of Lagrange multipliers. Prerequisite: Mathematics 3 or equivalent. Dist: QDS.

9. Multivariable Calculus with Linear Algebra
This course includes the multivariable calculus material present in MATH 8 along with a brief introduction to concepts from linear algebra. First-year students who have successfully completed a BC calculus curriculum in secondary school may complete multivariable calculus either by taking the two-term sequence MATH 9, 13 or by taking the single course MATH 11. Topics include vector geometry, equations of lines and planes, matrices and linear transformations, space curves (velocity, acceleration, arclength), functions of several variables (limits and continuity, partial derivatives, the derivative as a linear transformation, tangent planes and linear approximation, the Chain Rule, directional derivatives and applications, and optimization problems including the use of Lagrange multipliers).

11. Accelerated Multivariable Calculus
This course is a course in multivariable calculus aimed at students who have successfully completed a BC calculus curriculum in secondary school and earned a 4 or 5 on the CEEB Advanced Placement Calculus BC Examination. This course covers all of the material in the second half of Mathematics 8 and that in Mathematics 13. Dist: QDS.

13. Multivariable Calculus
This course is a sequel to Mathematics 8 and provides an introduction to calculus of vector-valued functions. Topics include differentiation and integration of parametrically defined functions with interpretations of velocity, acceleration, arc length and curvature. Other topics include iterated, double, triple, and surface integrals including change of coordinates. The remainder of the course is devoted to vector fields, line integrals, Green's theorem, curl and divergence, and Stokes' theorem. Prerequisite: Mathematics 8 or equivalent. Dist: QDS.

Middle Eastern Studies (MES)
The Middle Eastern Studies (MES) Program brings together scholars from across a wide range of disciplines to teach and research the great civilizations, societies, and cultures of the Middle East and North Africa. MES offers a wide array of courses on history, politics, religion, literature, and culture of the region (taught in English) as well as state-of-the-art language training in Arabic and Hebrew. MES also offers advanced seminars using primary sources. In addition to our offerings on campus, there is a full array of study abroad opportunities. The friendly, personal relationships that develop between professors and students in MES often extend beyond the students’ time on campus. Because of the pivotal role that the Middle East will play in the geo-politics, economics, and history of the twenty-first century, students with a strong background in the region are highly competitive for a wide array of professional opportunities, including consulting, NGOs, development, government, medicine, and law.
We urge interested students to begin Arabic or Hebrew during their first term at Dartmouth.

**SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:**

**ARABIC (ARAB)**
Spoken by almost 300 million people in the world today, Arabic is the dominant language in over twenty countries in the Middle East and North Africa as well as one of the six official languages of the United Nations. It is also the language of a rich cultural heritage spanning many centuries. In addition to broadening your intellectual horizons and understanding of the Middle East, studying Arabic opens up a surprising array of exciting professional opportunities.

Almost all students of Arabic at Dartmouth arrive on campus with no previous background in the language, and therefore enroll in Arabic 1 during the fall of their first year (followed by Arabic 2 and 3 in the winter and spring). Students with some background in Arabic should contact Professor Christopher MacEvitt for placement. Following this sequence then allows students to participate in the LSA+ in Rabat, Morocco in the summer term.

**ARAB 1. First-Year Courses in Arabic (Arabic 1)**
This is the introductory course for Arabic. Students first learn the sounds and letters of the Arabic alphabet and then study basic vocabulary and grammar. Students learn how to communicate about a variety of practical topics, from describing university life to talking about family members. Arabic 1 is the fundamental course for further study of the language.

**MES 8.01/GOVT 40.25 Introduction to Middle Eastern Politics**
This counts as one of the MES “Core” courses. This is a gateway course to the political life of the Middle East. Topics include: Conflict and civil war; security arrangements; political economy; political ideologies; authoritarianism; terrorism; and regional rivalries. First-year students are encouraged to take this course.

**MES 1.01 Introduction to Middle Eastern Studies**
Conflict seems like the lens through which the Middle East is perceived and studied. But beyond wars and religious fanaticism, are there other conflicts, both social and personal, that generate great art and dark humor expressed in literature, film, and music? This interdisciplinary course offers an introduction to the modern Middle East as a field of study, a region, and a site of cultural and artistic production. Each week is structured in such a way as to offer a historical and political context for particular issues or eras and shed light on the way people experience these issues through art and culture, contact and exchange. Starting with the examination of the rise of modernity and the effects of European colonialism on Middle Eastern politics and culture from the nineteenth century onward, we will examine the rise of nationalism, authoritarianism, and fundamentalism. We will link this discussion to recent developments in the region from the “Green Revolution” in Iran in 2009 to the “Arab Spring” starting in 2010 and analyze the role of social media and youth culture in the process. Before concluding with a discussion of Middle Eastern displacement and diaspora, we will address questions of gender and sexuality in Middle Eastern societies. No knowledge of Middle Eastern languages is required for this course.

**MES 16.07 Arabian Nights East and West**
An introduction to Arabo-Islamic culture through its most accessible and popular exponent, One Thousand and One Nights. The course will take this masterpiece of world literature as the focal point for a multidisciplinary literary study. It will cover the genesis of the text from Indian and Mediterranean antecedents, its Arabic recensions, its reception in the West, and its influence on European literature. The course will be taught in English in its entirety.

**HEBREW (HEBR)**
Hebrew has been one of the world’s most influential languages, through the Bible and other great writings. Miraculously revived, Hebrew is the main language of six million Israelis, with world-renowned literature and cinema. Students new to Hebrew can begin with Hebrew 1 (Modern Hebrew) in the fall term and complete the language requirement with Hebrew 2 in winter and Hebrew 3 in spring. Students with previous experience should take the Dartmouth generated language placement test during New Student Orientation. Students interested in participating on our exchange program with the Hebrew University of Jerusalem should contact Prof. Gliner.

1. **First-Year Course in Modern Hebrew (Hebrew 1)**
Offered only in the fall term, this course introduces written and spoken modern Hebrew to students without any background. In addition to the basics of grammar, emphasis is placed on communication and Israeli culture. Conversational drills and comprehensive exercises provide practice in pronunciation and the use of the basic patterns of speech.

**Music (MUS)**
The thirty-five full and part-time faculty in the Department of Music offer a diverse and comprehensive curriculum. Introductory music courses intended for the general student body cover topics from beginning music theory to opera. In addition, specialized courses in the history of Western art music, jazz, American music, world music, and sonic arts are offered frequently. Students may also receive private instruction for credit in string, brass, woodwind, and percussion instruments; classical or jazz piano; or in voice. Students may also receive credit for our chamber music, jazz, opera and contemporary performance laboratories (MUS 50) and for performance in a Hop ensemble (MUS 59). Introductory music courses are: Music 1-16.

**The following courses are recommended for first-year students (MUS):**
1. Beginning Music Theory
2. The Music of Today
3.02 American Music: Covers, Theft, and Musical Borrowing
4. Global Sounds
8. Programming for Interactive Audio-Visual Art
18.02 Hip-Hop in the United States
18.03 Verzuz: A History of Black Popular Music
20. Introduction to Music Theory
21. Melody and Rhythm
25. Sonic Arts 1: Machine Music
30.02 Film Scoring
43. From Beethoven to Now (Modern Classical Music)
50. Performance Laboratories, Sections 1, 2, 3
51. Oral Tradition Musicianship
53–58 Studies in Musical Performance (Individual Instruction Program)
59. Ensemble Performance and Leadership

**TRANSFER CREDIT**
Students who wish to receive transfer credit for college music courses taken prior to matriculation at Dartmouth should see the chair of the Department of Music early in the fall term.

**SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:**

**MUS 1. Beginning Music Theory**
A course intended for students with little or no knowledge of music theory. Among topics covered are musical notation, intervals, scales, rhythm and meter, and general musical terminology. Concepts will be directly related to music literature in class and through assignments. Students will have the opportunity to compose simple pieces and work on ear training. No prerequisite. Dist: ART.

**MUS 3.02 American Music: Covers, Theft, and Musical Borrowing**
Nearly every genre of American music is marked by its re-invention, adaptation, or outright theft of music from other cultures. We will study a wide cross-section of American music through the prism of musical borrowing. Our perspective includes songwriters, composers, and sound artists in rap, pop, rock, jazz, film, and the avant-garde. Readings on the aesthetics of cover songs, quotations, and plunderphonics will inform our engagement with American music and its sources. No prerequisite. Dist: ART; WCult: W.

**MUS 4. Global Sounds**
Global Sounds explores world music, focusing each term on selected regions, countries, and cultures,
Recommended Courses for First-Year Students

and on how music has moved between East and West, past and present, and “roots” and popular styles. Course work includes critical listening/viewing, reading, and short weekly writing assignments as well as a final creative project or research paper. Where possible, guest artists are invited to offer live musical demonstrations. No prior musical experience is required. Dist: ART; WCult: W.

MUS 18.02 Hip-Hop in the United States
This course is an introduction to hip-hop music and culture, intended to offer interdisciplinary perspectives on what is one of the most popular genres in the United States. From its humble origins in New York to now, hip-hop and rap music have changed the sonic landscape of the US and the world. We will examine rap music and hip-hop culture as artistic and sociological phenomena with emphasis on historical, cultural, economic and political contexts. Discussions will include the coexistence of various hip-hop styles, their appropriation by the music industry, and controversies resulting from the exploitation of hip-hop music and culture as a commodity for national and global consumption. No prerequisite. Dist: ART; WCult: CI.

MUS 21. Melody and Rhythm
Explores the art of organizing musical thoughts in time. Drawing from music of four continents and using class performance (singing, body percussion, playing instruments) as a primary vehicle, this course unlocks the structures and strategies employed by effective melodies and rhythms. Students will compose their own music, develop their skills in music analysis, and engage critically with literature on music cognition. Incorporates work on musicianship. No prerequisite. Dist: ART; WCult: W.

MUS 50. Performance Laboratories
Performance Laboratories provide weekly coaching and instruction in diverse forms of music making and are open by audition to all Dartmouth students. Course work centers on musical readings, discussion, and informal performance of selected repertory chosen both for its intrinsic interest and for its relevance to the contents of course syllabi within the music department. Performance laboratories may be taken for credit (three terms equal one credit) or on a not-for-credit basis. Subject to space availability, students may enroll in different laboratories during different terms. Terms of enrollment need not be consecutive. Dist: ART.

Department of Native American and Indigenous Studies (DNAIS)
Through the study of culture, literature, history, law, and contemporary issues, the Department of Native American and Indigenous Studies seeks to enrich our understanding of Native American and indigenous peoples. Dartmouth’s DNAIS is one of the oldest, and is known as one of the best, in the country. Most courses are open to all students. Courses may be used as a major or minor in DNAIS.

The following courses are recommended for first-year students (DNAIS):
8. Perspectives in Native American Studies
16. (HIST 39) 20th Century Native American History
18. (ENVS 18) Native Peoples in a Changing Global Environment
25. Indian Country Today
35. (ENGL 32) Native American Literature

SELECTED COURSES THAT EXPLOR THIS DEPARTMENT:
8. Perspectives in Native American Studies
The growing field of Native American Studies is inherently interdisciplinary. This course gives an overview of the relevant intellectual and cultural questions of tribal expression, identity, traditional thought, continuity, and sovereignty. Using readings from the areas of literature, philosophy, visual arts, anthropology, philosophy of history, and cultural and political discourse, we will examine how their discourses are used to promote or inhibit the ongoing project of colonialism in Indigenous communities and lives. Dist: SOC; World Cult: NW.

18. Native Peoples in a Changing Global Environment
This course is about Indigenous peoples’ relationships to land and natural resources and the threats that rapid environmental change, such as climate change and invasive species, pose to indigenous societies. What is at stake when significant changes, like the loss of a cultural keystone species, occur on indigenous homelands? In NAS 18 (ENVS 18), we attempt to understand the societal impacts of rapid environmental change from multiple perspectives including those of indigenous and non-indigenous actors. Dist: TMV; World Cult: NW.

Philosophy (PHIL)
Students who major or minor in philosophy learn to follow complex lines of reasoning, expose presuppositions, weigh evidence, craft arguments, make objections and replies, offer creative answers to philosophical questions, and construct independent solutions to philosophical problems. Majors in philosophy are knowledgeable about the main contemporary and historical areas, authors, concepts, methodologies, techniques and problems of philosophy. The benefits of a philosophy major extend well beyond philosophy, and our students go on to pursue careers in many areas, including law, film and media, medicine, finance, the arts, and academia. Please visit the department website for a complete listing of courses: https://philosophy.dartmouth.edu/.

The following courses are recommended for first-year students (PHIL):
1.01 The Problems of Philosophy.
1.03 Philosophy and Economics.
1.04 God, Darwin, and the Cosmos.
1.05 Reasons, Values, Persons.
1.08 Philosophy of Time and Time Travel.
1.09 Science, Superstition, and Skepticism.
1.10 Minds, Meanings, and Images.
1.16 Morality, Freedom, and the Mind.
1.17 Race and Modernity
3. Reason and Argument.
5. Philosophy and Medicine.
8. Introduction to Moral Philosophy.
9.01 Reproductive Ethics.

Which courses in this guide excite you? Which courses pique your intellectual curiosity?
3. Reason and Argument
An introduction to informal logic with special attention to the analysis of actual arguments as they arise in daily life as well as in legal, scientific, and moral reasoning. Along with the analysis and criticism of arguments, the course will also consider the methods for constructing arguments that are both logically correct and persuasive.

8. Introduction to Moral Philosophy
An introduction to the foundations and nature of ethics. Questions may include: What is the good life? What is it for something to have value? Are there acts that ought never to be done, no matter the consequences? Is ethics objective or relative to different perspectives? We inevitably make assumptions whenever we offer ethical verdicts about particular cases. This course aims to think systematically about those assumptions.

Physics and Astronomy (PHYS) (ASTR)
The Department of Physics and Astronomy offers a variety of introductory courses for students of different interests.

Astronomy (ASTR)
Astronomy 1, 2, 3, and 4 are intended primarily for students who do not plan to major in a physical science. These courses have no prerequisites and any of the courses ASTR 1, 2/3, and 4 may be taken independently of the others (ASTR 2 and ASTR 3 are the same course with and without lab so both may not be taken for credit). Students who wish a more technical introduction to astronomy and astrophysics are encouraged to take Astronomy 15 and/or 25. Math 3 and an introductory physics course (or permission of the professor if such a course was taken in high school) is required for enrollment in Astronomy 15.

Students interested in majoring in astronomy should consult Professor Brian Chaboyer. A brochure describing the major, including research opportunities for undergraduates, is available from the department office in 105 Wilder.

The following are recommended first-year courses (ASTR):
1. Exploration of the Solar System
2. Exploring the Universe
3. Exploring the Universe with Laboratory 15. Stars and the Milky Way

PHYSICS (PHYS)
Physics 1, 2, and 5 are intended primarily for students who do not plan to major in a physical science. These courses have no prerequisites and any one of them may be taken independently of the others.

There are three sequences of physics courses open to first-year students. Physics 13 and 14 are intended for students oriented toward the physical sciences or engineering. The two courses constitute the regular introduction to the fundamentals of mechanics, electricity and magnetism, and freely use calculus. These courses are offered in the fall (13), winter (13, 14), and spring (14). First-year students who take Physics 13/14 fall-winter may take Physics 19 in the spring term and can then start intermediate physics (40% level) in their second year. Alternatively, students who complete Physics 13/14 in the spring term can take Physics 19 in the fall or spring terms of their second year, and then move on to intermediate physics.

Physics 15 and 16 are the accelerated track into the physics major. These courses are intended for students who have an extremely strong background in both calculus and classical mechanics from high school. Students must qualify for Physics 15 by taking an online placement exam available starting in early August.

These two courses together cover the material of Physics 13, Physics 14, and Physics 19. Physics 14 may be substituted for Physics 16. Students who complete Physics 15/16 or Physics 15/14 and have sufficient math may move into intermediate physics (40% level).

Physics 3 and Physics 4 are less mathematically intensive treatments of the topics covered in Physics 13/14 and 15/16, with the addition of some modern physics. These courses are aimed at students interested in the life sciences or medical school. They do not serve as engineering prerequisites. Relatively few first-year students take these courses.

Students interested in majoring in physics or engineering physics should consult the departmental undergraduate advisor, Professor Kristina Lynch or Professor Jim Labelle. A brochure describing the major, including research opportunities for undergraduates, is available from the department office in 105 Wilder.

Here is an example of an introductory sequence for a student entering with no math or physics exemptions:
F - Math 3
W - Physics 13, Math 8
S - Physics 14, Math 13
F - Physics 19

Students entering with exemption from Math 3 or 8 may opt to take:
F - Physics 13, Math 8
W - Physics 14, Math 13
S - Physics 19

Students with exemption from Math 3 or 8 and placement into Physics 15 via the departmental online placement exam may opt to take:
F - Physics 15, Math 8 or 13 (or Math 9 or Math 11)
W - Physics 16, Math 13, 22 or 23
S - Physics 40

Students placed into Physics 15 may opt to take it in the Winter
F - Math 8 or 13
W - Physics 15, Math 22 or 23
S - Physics 16

CREDIT ON ENTRANCE AND ADVANCED PLACEMENT
A score of 4 or 5 on CEEB Advanced Placement Examinations in Physics results in Physics 3 exemption for the C-Mechanics exam, and Physics 4 exemption for the C-Electricity exam. Exemption from Physics 3, 4, 13, or 14 can also be earned by passing a local placement exam given by the department. The exam may be taken by those who have had a substantial physics background in high school.

Students who have a grade of A in A-Level Physics are eligible for exemption from Physics 3 and 4 without taking the local placement exam. Students are admitted to the accelerated sequence (Physics 15/16) based on (a) having placement into Math 8 or 9 or higher, and (b) satisfactory performance on an on-line placement exam administered prior to matriculation.

Students receiving pre-matriculation exemption from Physics 13 and Physics 14 based on the local placement exam may take Physics 19 in the fall or spring of their first year, provided they have the Math prerequisite (Math 13).
## Recommended Courses for First-Year Students

### PORTUGUESE (PORT)

(See program description under Spanish and Portuguese (PORT) placement exam. Dist: SLA.

- **Differential Equations. Special Relativistic Dynamics**: A threshold score on the physics departmental placement exam may be required. Prerequisite: Mathematics 3 and 8 (at least concurrently).

### PHYSICS (PHYS)

#### 3. General Physics I

The fundamental laws and phenomena of mechanics, heat, wave motion, and sound, including relativistic concepts. The Physics 3–4 sequence is elected primarily by 2nd and 3rd year pre-health students and is not accepted as a prerequisite to the engineering sciences major. Prerequisite: Mathematics 3. Dist: SLA.

#### 13. Introductory Physics I

The fundamental laws of mechanics. Reference frames. Harmonic and gravitational motion. Thermodynamics and kinetic theory. Physics 13, 14, and 19 are designed as a three-semester sequence for students majoring in a physical science. Supplemental course fee may be required. Prerequisite: Mathematics 3 and 8 (at least concurrently). Dist: SLA.

#### 15. Introductory Physics I, Accelerated Section

Physics 15 and 16 are an alternative sequence to Physics 13, 14, and 19 for students whose substantial background in physics and mathematics enables them to study the material at a greater speed than is possible in regular sections. Classical dynamics. Differential Equations. Special Relativity. Introduction to Quantum Mechanics including wave-particle duality of radiation and matter. The Uncertainty Principle and the Schrödinger equation. One laboratory period per week. Supplemental course fee may be required. Prerequisite: Mathematics 8 or 9 concurrently and achieving a threshold score on the physics departmental placement exam. Dist: SLA.

### Psychological and Brain Sciences (PSYC)

Psychologists are interested in understanding observable behavior and in developing models of the underlying cognitive and physiological processes. Neuroscientists are interested in understanding how the brain functions, drawing from psychology, biology, chemistry, engineering, medicine, and computer science. The Department of Psychological and Brain Sciences offers courses in social interaction, sensation and perception, the physiological basis of behavior, cognitive neuroscience, human and animal learning, cognitive and language processes, social and cognitive development, personality, and the behavior disorders. The Department offers a major and minor in Psychology and a major and minor in Neuroscience.

Psychology 1 (Introductory Psychology) serves as a broad-based introduction to psychology as the science of behavior. This course is prerequisite for the Psychology major. Psychology 6 (Introduction to Neuroscience) is the prerequisite for the Neuroscience major.

The following courses are recommended for first-year students (PSYC):

1. **Introductory Psychology**
2. **Introduction to Neuroscience**

### ADVANCED PLACEMENT

The department does not offer credit for Advanced Placement. Students who believe their preparation in Psychology is particularly strong may take a local placement exam during Orientation to determine if they should be exempted from Psychology 1.

Students who have received Advanced Placement credit for Statistics and who are considering becoming Psychology majors should take the Methods in Psychological Science local placement exam during Orientation, which will be used to determine whether or not the student is exempted from Psychology 10 (Statistical Methods) and placed into Psychology 11 (Laboratory in Psychological Science).

### TRANSFER CREDIT

It is possible for entering students to obtain transfer credit for Psychology 1 if they have taken an introductory psychology course at a four-year college or university. In order to qualify for such recognition, a grade of C or better is required. Students who wish to apply for such recognition should follow the process outlined on the Registrar’s Office website for prematriculation credit and submit the Prematriculation Transfer Credit Approval Form along with a syllabus, the title, author, and edition of the text used, and a transcript to the department. Courses taken in secondary schools or two-year colleges will not be considered for credit. The decision to award credit will be based on the materials submitted.

### SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:

1. **Introductory Psychology**

   This course provides an introduction to the scientific study of the mind, brain, and behavior. Emphasis is placed upon the basic psychological processes of perception, consciousness, cognition, memory, and motivation as well as development, personality, individual differences, social behavior, and psychological disorders. Dist: SOC.

2. **Introduction to Neuroscience**

   This course provides students with an introduction to the fundamental principles of neuroscience. The course will include sections on cellular and molecular neuroscience, neurophysiology, neuroanatomy, and cognitive neuroscience. Neuroscience is a broad field that is intrinsically interdisciplinary. As a consequence, the course draws on a variety of disciplines, including biochemistry, biology, physiology, pharmacology, (neuro)anatomy, and psychology. The course will begin with in-depth analysis of basic functions of single nerve cells. We will then consider increasingly more complex neural circuits, which by the end of the course will lead to an analysis of the brain mechanisms that underlie complex goal oriented behavior. Dist: SCI.

### Public Policy (PBPL)

The Nelson A. Rockefeller Center sponsors an interdisciplinary minor in Public Policy for students of all majors who seek a coherent program of study organized around public policy challenges, such as health, education, the environment, leadership, and law. The minor in Public Policy allows students to build on their coursework taken in departments across campus by exploring various theoretical concepts of governance and socio-economic interaction and applying them to the real world of public policymaking. The Public Policy minor complements any major offered at Dartmouth, whether in the sciences, social sciences, or arts and humanities. Many students build an international dimension into their minor.

The six-course sequence for the minor includes a gateway public policy process course, Public Policy 5: Introduction to Public Policy; a choice of two 40-level public policy tools and methods courses; and three courses in a particular public policy domain, including a capstone public policy seminar. Incoming students are strongly encouraged to enroll in Public Policy 5 during the Winter Term and to complete the social science statistical analysis prerequisite (in most cases, Government 10 or an equivalent course) during their first year on campus.

What sets the Public Policy minor coursework apart from the more traditional courses at Dartmouth is the direct connection to the public policy process at the international, federal, state, and local levels pursued in the Public Policy courses.
Pay attention to the breadth of the liberal arts curriculum as well as the potential depth of an area of study.

First-year students who complete both Public Policy 5 and the social science statistical analysis prerequisite are eligible to apply for the Rockefeller Center First-Year Fellowship Program. This program, conducted each summer in Washington, DC, pairs 20 first-year students to serve as interns with Dartmouth Alumni Mentors who work in the public policy realm in Washington, DC. For more information about the Public Policy minor and the First-Year Fellows Program please contact Professor Shaiko, the Rockefeller Center’s Associate Director for Curricular and Research Programs, or Laura M. Mitchell, Public Policy Program Officer, via e-mail or at (603) 646-2229.

The following courses are recommended for first-year students (PBPL):

- 5. Introduction to Public Policy
- 26. Health Politics and Policy
- 28. Law, Courts, and Judges
- 41. Writing and Speaking Public Policy
- 42. Ethics and Public Policy
- 43. Social Entrepreneurship
- 44. Polling, Public Opinion, and Public Policy
- 46. Policy Implementation

**Quantitative Social Science (QSS)**

The Program in Quantitative Social Science (QSS) offers a structured undergraduate curriculum that combines strong methodological and technical training with a concentration in a traditional social science field. The QSS curriculum is grounded in computing and quantitative analytical techniques, and students who study in the program leverage these techniques in the pursuit of data analysis in the social sciences.

QSS offers both a minor and a major. Students pursuing either of these programs combine a specialization in one of the social sciences with foundational coursework in mathematics, computer science, data analysis, and modeling. Both the QSS minor and major have research components that students complete in their last years on campus. If a Dartmouth student is interested in anthropology, economics, education, geography, environmental studies, history, political science, psychology, or sociology as a quantitative social science, QSS is ready-made for the challenge. The strong training of Dartmouth QSS majors has led alumni to a variety of careers and advanced degrees, including university teaching and research, law, business, medicine, and public policy. Interested first-year students are advised to begin a curriculum in data analysis and mathematics and to consult with faculty affiliated with QSS.

**SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:**

**15. Introduction to Data Analysis**

Methods for transforming raw facts into useful information. The course includes basic techniques for detecting interrelations among events and for assessing trends. Topics include exploratory data analysis, and QSS 15 may be used in some departments in place of an introductory methodology requirement. Prerequisite: Mathematics 3 or its equivalent or permission. Directed toward students with an aptitude for mathematics and statistical reasoning. Recommended for first-year and second-year students wishing to pursue coursework in QSS or continue in the social, biological, or physical sciences. Dist: QDS.

**17. Data Visualization**

Big data are everywhere – in government, academic research, media, business, and everyday life. To tell the stories hidden behind blizzards of data, effective visualization is critical. This course primarily teaches R, a free software environment for statistical computing and graphics, which is widely regarded as one of the most versatile and flexible tools for data visualization and, more broadly, data science. Students completing the course will know how to “wrangle” and visualize data critical to their scientific endeavors. Dist: TLA

**Religion (REL)**

Religion lies at the core of all cultures and societies. An objective understanding of religion is thus a crucial component of a liberal-arts education. The Department of Religion offers a rich list of courses on the major religions of the ancient and modern world, as well as courses on religion and ethics, the nature of religious belief, myth and ritual, religion and gender, and many other topics. The Department also offers a foreign study program at the University of Edinburgh in Scotland. Many students find that a major, modified major, or minor in Religion is an excellent choice of concentration in the liberal arts. Please visit the Department website for a complete listing of courses: https://religion.dartmouth.edu/.

The following courses are recommended for first-year students (REL):

- 1.05 Religion and Gender.
- 1.08 The Religion of Things.
- 1.09 Religion and Drugs.
- 1.11 Sisters, Sages, Seekers: Women and Religion.
- 2.01 Religions of Southeast Asia.
- 3.01 Indigenous Religions in the Colonial Americas.
- 6. Introduction to Judaism.
- 10. The Religions of China.
- 16.02 Modern Islam.
- 16.03 Islam in America.
- 16.06 Islamic Spirituality.
- 18. Indian Buddhism.

**TRANSFER CREDIT**

Since the quality of instruction in religion at colleges and universities varies widely, the Religion Department is hesitant to approve courses for pre-matriculation and/or transfer credit and does so only in rare cases. The Department requires a full syllabus noting required readings and the name of the instructor for any course in religion presented for pre-matriculation credit. Application for credit should be made through the chair of the Department as soon as possible in the fall of the first year. The Religion Department does not normally approve more than one course per student for transfer or pre-matriculation credit.

**SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:**

**REL 1.08 The Religion of Things**

Despite our tendency to associate religion with “belief”, all religion is necessarily mediated through things. This course approaches religion as a fundamentally material phenomenon, introducing students to its analysis from the perspective of artifacts, rather than through texts and ethnographic accounts. A wide range of case studies will be considered, from consumerist religion in the modern United States, to the relics and icons of medieval Europe, to the indigenous shrines of the ancient Andes. Dist: TMV.

**REL 2.01 Religions of Southeast Asia**

This introductory course surveys religion in Southeast Asian contexts. We begin by analyz-
Recommended Courses for First-Year Students

The following courses are recommended for first-year students (RUSS):

1. Introductory Russian
2. Russian Civilization
3. Russia and the West
4. The World as Word: 19th Century Russian Fiction
5. Reading Red: 20th Century Russian Fiction

ADVANCED PLACEMENT

Graduation credit is not granted for secondary school courses in Russian, but students with secondary school Russian should take the Russian Department's local placement exam (*). Students who demonstrate sufficient knowledge will thereby satisfy the Dartmouth College language requirement and be eligible for Russian 27; students whose knowledge is substantially greater will receive credit on entrance for Russian 27 and be eligible for Russian 28 or higher-level courses.

TRANSFER CREDIT

Students who wish to receive credit for college Russian courses taken prior to matriculation at Dartmouth should see the Chair of the Department of Russian early in the fall term.

SELECTED FALL TERM COURSES (RUSS)

1. First-Year Course in Russian
   An introduction to Russian as a spoken and written language.

13. Slavic Folklore: Vampires, Witches, and Firebirds
   In this course, we will discuss a variety of genres from Russian folklore. As we move from the familiar genre of the riddle to the often mystifying beliefs and rituals of the ancient Slavs and then to the fairy tale, comfortably familiar from childhood, we will learn to not only recognize the richness and density of texts that may initially seem uncomplicated but also to discern the patterns and meanings behind the apparently exotic narratives and behaviors. By thoroughly studying one of the world's richest oral traditions, Slavic folk life and folklore, we will acquire the tools and techniques necessary for collecting, documenting, and interpreting folklore—which is perhaps the most truly international of all arts. The course is based on materials in Russian and East European cultures, but also draws from other traditions.

   Dist: INT or LIT. WCult: W.

33. Reading Russian Today: Avant-Gardes, Dystopias and Dreamers
   This course focuses on Russophone literature, film, art and culture in the new millennium (from the early 2000s to the present day), incorporating a crucial discussion of the late Soviet period and the 1990s. Beginning with the collapse of the USSR, cultural life in Russia has been characterized by ceaseless change, but also the reemergence of old patterns, tendencies and problems. Much contemporary Russian literature and art is caught up in complicated negotiations with the Soviet past and its social, cultural and political institutions, while also looking ahead to an uncertain future. We will read novels, short stories, plays and poetry, watch films and discuss visual and performance art with a view to topics ranging from gender and sex, activism and violence, family and national identity, internet communication and other language problems.
   Dist: LIT. WCult: W.

Sociology (SOCY)

Sociology enables us to understand how the dynamics of society affect and are shaped by individuals. It seeks first to describe the various forms of social structure which we all inhabit—groups, organizations, communities, social categories of class, sex, age, or race, and social institutions such as the economy, family, politics, and religion. Next, sociology seeks to explain how these structures affect patterns of human attitudes, behaviors, and opportunities, and simultaneously how individuals through collectivities construct, maintain, and alter social structure.

The curriculum of the Department of Sociology includes courses on social psychology and social change; organizations, and institutions; social movements and political sociology; and class, gender and race inequalities. Sociology offers a standard or modified major, a standard minor, and two specialized minors: Markets, Management and the Economy; and Social Inequality. Requirements for majors and minors are explained in the ORC and on our website: http://sociology.dartmouth.edu.

The following courses are recommended for first-year students (SOCY):

1. Introductory Sociology
2. Social Problems
10. Quantitative Analysis of Social Data
11. Research Methods
15. Sociological Classics
16. Constructing Social Theory
26. Capitalism, Prosperity, and Crisis
34. Health Disparities
35. Sociology of Mental Health
38. Status and Power in Social Interaction
42. A Sociological Introduction to the Asian American Experience
47. Race and Ethnicity

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:

1. Introductory Sociology

How have societies developed historically? How are societies stratified by wealth, income, and other resources, and how has this changed over time? How are the opportunities and outlooks of individuals shaped by the communities in which they reside? How do individuals come together to produce meaningful social change? This course provides answers to these and other questions in ways that provide a broad introduction to the field of sociology. We will cover how sociologists and other social scientists conduct research, key theories and concepts that guide the discipline, and explore a wide range of topics including race, class, gender, inequality, collective action and social change. In many cases, the topics covered in the course reflect the research interests and course offerings of faculty in the sociology department at Dartmouth. As a result, the course also provides an introduction to some of the curriculum offered in the department. Open to all classes. Dist: SOC; WCult: W.
Spanish and Portuguese (SPAN) (PORT)

Students who take classes or choose to pursue a degree program in our Department not only acquire linguistic and cultural competence in Spanish and Portuguese – they are also better equipped to face the new challenges posed to globalized citizens of the 21st century.

Spanish and Portuguese offers all levels of beginning language as well as advanced topics courses for intermediate and native speakers. These prepare students to understand important cultural, political and historical issues in the Spanish and Portuguese speaking worlds and enrich their critical thinking about national identities, gender, race, ethnicity, and migration in and outside the US.

We offer multiple off-campus programs in Buenos Aires, Barcelona, Madrid, Santander, and São Paulo. We are also affiliated with the University of Havana. The majors offered are (a) Hispanic Studies, (b) Romance Studies, (c) Modified. Major in Hispanic Studies, and (d) Modified Major in Lusophone Studies. The minors offered are in Hispanic Studies, Lusophone Studies (Literature and Culture of the Portuguese speaking world), and a combined minor in Hispanic and Lusophone Studies.

INTRODUCTORY LANGUAGE COURSES

PORTUGUESE (PORT)

Portuguese 11 (Intensive Portuguese) and Portuguese 3 furnish the basic training to prepare for intermediate courses (Portuguese 20 on campus) or to go on our LSA+/FSP to São Paulo in Winter. Students may use Portuguese 11 and Portuguese 3 to satisfy the language requirement; depending on previous language experience, some students may satisfy the requirement by taking Portuguese 20.

SPANISH (SPAN)

Three one-term introductory courses (Spanish 1, 2, and 3) prepare students for the intermediate offerings (Spanish 9 and 20). In addition to the introductory sequence (Spanish 1, 2, and 3), the following courses may be used to satisfy the language requirement depending on previous language experience: Spanish, 9, Spanish 15, Spanish 20. In addition, Spanish 53 counts as a Language Requirement for Proficient Speakers (LRP) course and may also be used by qualified students.

COURSE PLACEMENT

Which class should I take if I wish to continue with my studies in Spanish at Dartmouth College?

<table>
<thead>
<tr>
<th>If I have taken the SAT II test:</th>
<th>0 – 410: Spanish 1</th>

</tbody>
</table>

| Students who have not taken SAT II, AP, British A level, or IB exam must take the Department placement exam at which they wish to continue with their Spanish studies at Dartmouth. The exam is offered via Canvas for incoming first-year students from August 1–September 8. Upon completing the exam, the course for which you should register will be indicated. All students who place out of Spanish 3 on the local placement exam will be required to take an oral exam on campus during or shortly after Orientation. Students who miss the pre-orientation placement exam will be given an opportunity to make up the test at a date to be determined. For more general information about language classes and the online exam, see the department website. Students who have lived or studied abroad for more than 6 months should contact the Language Program Director for further placement information. |

| If you studied Portuguese before coming to Dartmouth or have other experience with the language, you must take the Portuguese Placement Test (PPT) to be placed in the appropriate level class. The PPT consists of two parts: one written and one oral. The written part tests knowledge of grammar, reading comprehension, and writing composition. The written exam is followed by an interview that tests oral comprehension. It is offered in the fall and winter during the first week of classes. Students interested in taking the PPT should contact Professor Rodolfo Franconi or Professor Carlos Minchillo in order to take the test. |

TRANSFER CREDIT

Transfer credit is not granted to incoming first-year matriculating students for Spanish and Portuguese (language 1, 2, 3) courses taken at other colleges and universities before matriculation. For transfer credit for equivalent courses 9 and above, email the Language Program Director (for Spanish) or Professor Rodolfo Franconi (for Portuguese).

LANGUAGE REQUIREMENT

The following courses may be used to satisfy the language requirement, depending on previous language experience: Portuguese 11, 3, 8, and 20; Spanish 1, 2, 3, 9, 15, 20, and 53.

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:

1. Spanish I
Introduction to spoken and written Spanish. Intensive study of introductory grammar and vocabulary with a focus on culture and communication. Oral class activities, readings and compositions. Weekly practice in the virtual language lab includes media, full-feature films and weekly drill sessions. Never serves in partial satisfaction of the Distributive or World Culture Requirements.

2. Spanish II
Continuation of Spanish 1. Further intensive study of grammar and vocabulary with a focus on culture and communication. Oral class activities, readings and compositions and continued practice in the virtual language laboratory. Weekly drill sessions. Completion of this course on campus satisfies the language requirement for students with demonstrated competency in a language other than English or Spanish. Never serves in partial satisfaction of the Distributive or World Culture Requirements. Prerequisite: Spanish 1, or a Placement Test score over 550.

3. Spanish III
Continuation of Spanish 2. Spanish 3 provides additional, intensive study of grammar and vocabulary with a focus on literature and culture. Oral class activities, readings and compositions and continued practice in the virtual language laboratory. Weekly drill sessions. Completion of this course on campus or as part of the LSA constitutes fulfillment of the language requirement. Never serves in partial satisfaction of the Distributive or World Culture Requirements. Prerequisite: Spanish 2, or a Placement Test score over 475.
9. Culture and Conversation: Advanced Spanish Language
This course serves as a bridge between Spanish 3 and Spanish 20. Through the intensive study of a variety of media (e.g., documentaries, TV programs, podcasts, films), grammar, vocabulary, and speech acts as presented in the course packet, students will actively practice listening and speaking, and hone their writing skills with the goal of reaching an Intermediate High Level on the ACTFL scale. Topics and materials may vary each term. Completion of this course on campus constitutes fulfillment of the language requirement for students with demonstrated competence in Spanish. Prerequisite: Spanish 3; score of 690 or better on the SAT II test; AP Lang 4 or 5, or AP Lit 4; Placement Test score over 600; or permission of the instructor. It serves as a prerequisite for the LSA+ program or for Spanish 20.

15. Latinx Writing and Composition
This course draws on the strengths of Latinx Language Learners in order to enhance their skills in writing and composition. Using a variety of media and genres, students will explore the cultural experiences of US Latinx communities and the Spanish-speaking world. The course will focus on structures related to languages and cultures in contact, and review grammar to expand students’ range from informal to academic communication. The course will have an experiential learning component, including student projects throughout the term, and participation in events around campus related to Spanish-speaking communities. It can be used to fulfill the language requirement depending on previous language experience. It serves as pre-requisite for Spanish 20. May not be taken in conjunction with Spanish 9.

20. Writing and Reading: A Critical and Cultural Approach
Spanish 20 is the first course of the Major/Minor and serves as transition between the skills acquired through the Spanish language courses (Spanish LSA or equivalent preparation) and those needed for all upper-division courses (30 and above). Through the study of critical and theoretical vocabulary, and the reading of short stories, poems, films, theatrical plays, and journalistic articles, students will acquire analytic tools to comprehend and analyze several types of texts. This course is also designed to familiarize students with different textual genres and a wide array of literary and interpretative key concepts. Completion of this course on campus as part of the LSA+ constitutes fulfillment of the language requirement for students with demonstrated competence in Spanish. Prerequisite: Participation in one of the Spanish LSA programs; Spanish 9 or 15; exemption from Spanish 9 or 15 based on test scores (see Department website); or permission of instructor. Spanish 20 may be taken in conjunction with 30-level survey courses. It serves as a prerequisite for all Spanish courses 40 and higher. Dist: LIT.

11. Intensive Portuguese
Portuguese 11 is a 1-credit course that combines Portuguese 1 and Portuguese 2 in one term. It is a fast-paced course that introduces students to the Portuguese language and the cultural and social aspects of Brazil and other Portuguese-speaking countries. Students will develop basic communicative skills through engaging activities that cover oral, listening, written, and reading practice. Standard grammar structures will be taught in tandem with idiomatic usage so that students will be ready to use the language in formal and informal situations. Intensive use of films, documentaries, popular music, online news media, and social media will accelerate the learning of the language and provide a fruitful avenue for understanding cultural issues and current events regarding the Portuguese-speaking countries. By the end of this course, students will be able to communicate facts, ideas, habits, and feelings, using present, past, and future tenses. Upon successful completion of this course, students will be able to take Portuguese 3. Completion of this course on campus may satisfy the language requirement depending on previous language experience. Never serves in partial satisfaction of the Distributive or World Culture Requirements.

3. Portuguese III
PORT III provides additional, intensive study of grammar and vocabulary with a focus on literature and culture. Oral class activities, readings and compositions and continued use of films, music and other media. Weekly drill sessions. Completion of this course constitutes fulfillment of the language requirement. Never serves in partial satisfaction of the Distributive or World Culture Requirements. Open to first-year students by qualifying test and to others who have passed PORT II.

Studio Art (SART)
The Department of Studio Art provides students the opportunity to participate in a strong studio program within the liberal arts context. Classes are taught by well-established artists, whose work is exhibited throughout the U.S. and abroad. Students have full use of large, well-equipped studio facilities.

Course offerings include all levels of: architecture, drawing, painting, photography, printmaking and sculpture. Classes are open to all Dartmouth undergraduates, but are limited in size to encourage individual expression and close personal interaction between faculty and students.

Senior majors are encouraged to focus in one or two areas of concentration for their culminating experience. Many establish themselves in art-related careers after graduation. Sculpture I, Drawing I, Photo I, Printmaking I, Architecture I, Special Topics, Figure Drawing and Figure Sculpture DO NOT have a prerequisite, and no prior knowledge of any of these courses is required.

The following courses are recommended for first-year students (SART):
Drawing I
Sculpture I
Special Topics: Digital Drawing
Architecture I
Photography I
Printmaking I
Figure Sculpture
Figure Drawing

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:

15. Drawing I
In this introductory course, major and non-major students will explore the issues of mark, line, scale, space, light, and composition. Students will develop their own critical ability as well, enabling them to discuss the work presented in class. Although the majority of work will be from the observed form, such as still life and the human figure, non-observational drawing will also be emphasized. Various kinds of charcoal, ink, and pencil will be the primary media used. Supplemental course fee required. Dist: ART.

16. Sculpture I
The emphasis of this course is to make and critique sculpture. Three-dimensional design concepts and various elements of sculpture such as form, space, surface, and time, will be discussed. Students will develop an understanding of different materials and techniques in conjunction with the aesthetics of each medium. This course focuses on an individual approach to creative problem solving, with students developing skills and art terminology to critique their own sculpture and that of others. Supplemental course fee required. Dist: ART.

17.08 Special Topics: Digital Drawing
This class will explore the connection of hand drawing and digital drawing to create original images. Students will explore the implications, opportunities and technical issues of using the computer as a drawing tool and combine computer-generated drawings with those done by hand. Drawings may combine layering, collaging and converting 3D form to 2D hand drawings using PhotoShop, Illustrator and Rhino software, among others. Supplemental course fee required. Dist: ART.

29. Photography I
An introductory course focused on the conceptual and technical fundamentals of analog and/or digital photographic technologies. Concentrating on both image-making and the fine print, assignments, guests, lectures, discussions, and critiques, engage students in critical contemporary art discourse as they explore the photographic image as a powerful tool for artistic self-expression. Supplemental course fee required. Dist: ART

27. Printmaking I
The course offers an introduction to print media
(etching, stencil printing, relief, and artist books). Processes vary based on subtitle and explore a range of materials. Students will consider printmaking in a contemporary context through technique and discussion, while discovering new methods of practice, including collaboration, unfamiliar materials, and a hybridity of processes. Supplemental course fee required. Dist: ART

Theater (THEA)
The Department of Theater welcomes all Dartmouth students to participate in the study and practice of theater. While the department does offer a theater major and a minor, students do not have to be majors or minors to participate. Students from all parts of campus are invited to enroll in theater courses and to participate in the department’s busy production program as actors, directors, playwrights, designers, stage managers, dramaturgs, and technicians. Students interested in auditioning for our MainStage or student-directed productions should visit our website for up-to-date information at theater.dartmouth.edu. We also encourage students to visit our exciting Open House during orientation.

To provide students with a solid foundation in all aspects of theater study, the department offers a wide range of both classroom and studio-oriented courses. Courses in dramatic literature, theater history, and criticism are balanced by offerings in practical aspects of theater production such as performance, directing, design, playwriting, stage management, and theater technology.

Students who wish to major or minor in theater are assisted in designing a program that covers both the scholarly and practical aspects of the theater. Non-majors are invited to enroll in theater classes and to participate in all aspects of the production program.

Our Foreign Study Program (FSP) occurs every other summer, starting Summer 2022; students may participate as early as the summer after their first year, provided they have met the prerequisites (one theater history and one theater practice course; see our website for details). Students spend ten weeks in London studying at the London Academy of Music and Dramatic Art and attending up to thirty performances at a variety of London theaters, all of which is paid for by the program. Students receive three Dartmouth credits for the FSP.

The following courses are recommended for first-year students (THEA):
10. Special Topics in Theater
15. Theater and Society I: Classical and Medieval Performance
16. Theater and Society II: Early Modern Performance
17. Theater and Society III: 19th and 20th Century Performance
21. Race, Gender, and Performance
22. Black Theater, USA
23. Postcolonial African Drama
24. Asian Performance Traditions
26. Movement Fundamentals I
28. Dance Composition
30. Acting I
36. The Speaking Voice for the Stage
40. Technical Production
41. Stage Management
44. Lighting Design
48. Costume Design
50. Playwriting I
54. Directing

SELECTED COURSES THAT EXPLORE THIS DEPARTMENT OR PROGRAM:
15. Theatre and Society I: Classical and Medieval Performance
This course explores selected examples of world performance during the classical and medieval periods in Western Europe and Eastern Asia. Plays to be discussed might include those by Aeschylus, Sophocles, Euripides, Aristophanes, Seneca, Plautus, Terence, and Zemni. Through the reading and discussion of primary and secondary texts, we seek to situate selected performance texts within their sociopolitical and artistic contexts. Open to all classes. Dist: ART or INT; WCult: W.

21. Race, Gender, and Performance
Students will explore the perspectives of contemporary Latina/o, Asian American, Black, and Native American theater artists/performers. Our examination will also consider the socio-historical and political contexts engaged through these artists’ works. We will also consider the relationship between the construction of identity and strategies of performance used by playwrights/performers to describe race, gender, sexuality, class, subjectivity, and ideas of belonging. Texts examined will include works by Moraga, Highway, Wilson, Parks, Gotanda, and Cho. Open to all classes.

26. Movement Fundamentals I
An introduction to movement for the stage, this course will animate the interplay between anatomy, movement theories, and performance. Through exploration of physical techniques, improvisation, and movement composition, students will experience a fundamental approach to using the body as a responsive and expressive instrument. Assignments will include readings, written work, class presentations, mid-term exam, and final paper. Open to all classes. Dist: ART.

30. Acting
This course is open to all students. No theater experience is necessary. To achieve success as a performing artist, an actor must commit to building an ensemble based on respect and mutual understanding and to embracing the notion that empathy is at the heart of the actor’s art. Students will be encouraged to explore their creative abilities on a journey of self-discovery in order to build this sense of ensemble. Through individual and group exercises, students will be introduced to the techniques necessary to play a character believably and honestly. The class will culminate with a scene presentation from realistic American plays by authors of diverse cultural backgrounds. Open to all classes. Dist: ART.

40. Technical Production
An introduction to the technical aspects of live theater, exploring both traditional and modern approaches. Topics include the stage and its equipment, materials and construction of scenic and property items, lighting, sound, rigging, design, stage management, and more. This course includes both lectures and hands-on learning. Open to all classes.

42. Scene Design
An introduction to the basics of scenic design through weekly projects in scale models, drawings, research, lighting, and storyboards. Students will also study the collaborative process among scenic designers, directors, costume, and lighting designers. Suitable for students interested in theater, visual and video art, installation, film, architecture, and sculpture. Students will have the opportunity to assist student and faculty scene designers on Department of Theater productions. Open to all classes. Dist: ART.

50. Playwriting I
The aim of this course is for each student to write the best one-act play they are capable of writing. It is open to students both with a theater background and those without. This course will involve a number of creative exercises, the
### Recommended Courses for First-Year Students

**Women's, Gender, and Sexuality Studies (WGSS)**

The Women's, Gender, and Sexuality Studies Program at Dartmouth College, the first such program in any of the previously all-male Ivy League colleges, offers multidisciplinary and cross-cultural courses on gender and sexuality. Our program faculty includes over 70 faculty members drawn from the Arts and Humanities, Social Sciences, and Sciences. The Women's, Gender, and Sexuality Studies Program enriches the traditional liberal arts curriculum by celebrating the multiplicity of gender and sexual identities (female, cisgender, trans, queer, nonbinary, etc.) and by helping students understand how gender and sexuality intersect with social markers such as race, ethnicity, class, ability, religion, and country of origin. Courses in WGSS are rich and diverse, as faculty share their cutting-edge research on topics such as Black feminist thought and intersectionality, transnational feminisms, queer theory, the sociology of gender, feminism and queer histories, gender and literary studies, etc. Most courses are open to all students and may be taken for elective credit, as part of the Women's, Gender, and Sexuality Studies Major, Minor, Modified Major or to satisfy distributive requirements.

**Writing and Speech Program: The Institute for Writing and Rhetoric**

The Institute for Writing and Rhetoric at Dartmouth College oversees first-year writing courses (Writing 2-3, Writing 5, and the First-Year Seminars taught in departments and programs throughout the College); selected upper-level courses in Writing courses in Speech; and free student support services through our writing tutoring center. Dartmouth's first-year writing sequence prepares students to engage fully with their intellectual work in every discipline. In order to provide a solid foundation for that work, Dartmouth requires first-year students to take Writing 5 or Writing 2-3, followed by a First-Year Seminar. Humanities 1-2 may also be taken to fulfill the first-year writing and first-year seminar requirements, with Humanities 1 taking the place of Writing 3 and Humanities 2 taking the place of First-Year Seminar.

**PLACEMENT PROCESS FOR FIRST-YEAR WRITING COURSES:**

All incoming students should complete the directed self-placement process for first-year writing. This process is designed to help students select among the writing courses that fulfill the first-year writing requirement. Students who select and are offered placement into a Writing 2-3 course will be preregistered for Writing 2 when they arrive on campus in the fall. Students who take the Writing 2-3 course sequence take their First-Year Seminar in the spring term. Students who select and are offered placement into Writing 5 are assigned to take the course in either the fall or the winter; this term assignment cannot be changed. Writing 5 term assignment information appears in the online student placement record visible to students and their advisors just prior to fall course registration. Students taking Writing 5 in the fall will register for Writing 5 when they register for their other fall courses. See our website for further information about placement and registration:

**TRANSFER CREDIT**

Transfer students may request approval of transfer credit for Writing 5 or Speech courses based on courses taken at other colleges or universities before matriculation at Dartmouth. The deadline for all requests for credit is the end of the first term of study.

**SPEECH (SPEE)**

This course covers the theory and practice of public speaking. Building on ancient rhetorical canons while recognizing unique challenges of contemporary public speaking, the course guides students through topic selection, organization, language, and delivery. Working independently and with peer groups, students will be actively involved in every step of the process of public speaking preparation and execution. Assignments include formal speeches (to inform, to persuade, and to pay tribute), brief extemporaneous speeches, speech analyses, and evaluations. No prerequisites. Limited enrollment. Disc: ART.
The Health Professions Program (HPP) is Dartmouth’s four-year+ pre-health advising program for students interested in health professions. We help you navigate the rigorous path of academic, experiential, and personal growth while you explore and prepare for a health profession (medical, veterinary, dental, nursing, etc.). We offer one-on-one advising, group workshops, a peer mentor program, a program for students from backgrounds underrepresented in medicine, and many other opportunities. www.dartmouth.edu/prehealth/.

Plan to attend the essential pre-health advising programs during New Student Orientation. Meet with your pre-health advisors as soon as possible after arriving, throughout your first year, and beyond. Use our weekly drop-in hours or make an appointment to meet with us. Your pre-health advisors will assist you with course selection, learning and study strategies, personalizing your D-Plan, determining your unique timing and choices, supporting self-assessment and self-reflection, experiences outside the classroom, and guiding you through the actual health profession school application. The pre-health journey is also experiential. Participate in Dartmouth’s local shadowing program, receive guidance for finding undergraduate research and internship opportunities, service experience, attend workshops that help you clarify your goals, meet your peer pre-health community, mentors, and learn about the pre-health process.

**What is especially useful to know to get started?**

There is no universal path. Students arrive with different math and science backgrounds and levels of clarity about their aspirations. Some take a term or two to adjust to the pace of college, review or learn essential foundations, or just explore other interests. Some are ready to dive into a science course in the first term.

A strong foundation in algebra and at least some knowledge of calculus upon matriculating is very useful for pre-health prerequisite classes. We advise students with a pre-health aspiration to begin learning or to review this material over the summer even if you have already taken calculus. Get acquainted with, or review, your chemistry and biology concepts. There is great free material online at www.khanacademy.org/ https://genchem.host.dartmouth.edu/ .

A summer community college class is another option, as are free online courses on Courseera. Although there are different paths and timelines to consider, pre-health coursework takes planning, as you will see as you read through the requirements at the end of this section; speak with a pre-health advisor as early as possible.

**Does my major matter?**

No. There is no “pre-health” major at Dartmouth; you are a Dartmouth liberal arts student. Medical schools care that you develop a love of learning and depth of knowledge in your area of focus. Majors in the Humanities, Sciences, and Social Sciences are all just as likely to be strong candidates for a health profession if they are otherwise qualified and successful in the science prerequisites. With planning and assistance, your major courses and prerequisites can fit together. Your HPP advisors are here to support that journey.

**When do people apply to a health professions school?**

85 percent of students who apply to a medical, dental, or veterinary school from Dartmouth apply the summer after they graduate or in future years as alumni. This means one or more “gap” years are typical. This allows at least four years to take the prerequisite courses, develop personally, and prepare for the MCAT. The average age of a student entering medical school is currently 24 or older. Students find jobs or fellowships for a “gap year(s)” during their senior year. To attend medical school immediately after graduation, you would plan to apply early summer at the end of junior year: it’s a year long process.

**How do I gain new strategies for success in pre-health classes?**

It is typical to need to develop new, more effective studying and learning strategies as a college student. Explore ways of studying differently: get great tips on learning strategies from HPP, your faculty, the Academic Skills Center, Undergraduate Deans Office, your Teaching Science Fellows, and your peers.

**SEE THE FOLLOWING INFORMATION FOR CURRENT PRE-HEALTH REQUIREMENTS FOR MOST HEALTH PROFESSIONS SCHOOLS (INCLUDING MOST VETERINARY AND DENTAL).**

---

**PLEASE NOTE:** We strongly discourage students from doubling up on lab classes in the first year; it is most typical to take one lab class at a time in general. We encourage students to adapt to science at Dartmouth and then decide what is right for them.

**SUBJECT:** English (ENGL) - 2 courses. AT DARTMOUTH: First-year Seminar and Writing 5 (or Writing 2&3) fulfills this requirement.

**SUBJECT:** Biology (BIOL) - 2 courses with lab. AT DARTMOUTH: Foundation courses with lab include 12, 13, 14, and 16. Most students choose Bio 12, 13, and 14 to be better prepared for the MCAT and med/dental/vet school, however, a student could choose 16 as well. To help students determine if they are sufficiently prepared to enter a foundation course directly, the Biology department has established an online self-assessment exam for students. Bio 11 or Bio 2 are excellent entries into Biology at Dartmouth, depending on student’s previous background. Speak with the pre-health advisors regarding your best path through Biology preparation.

**SUBJECT:** Chemistry (CHEM) - 2 courses Gen Chem with lab; and 2 terms Organic Chem with lab. AT DARTMOUTH: Calculus (Math 3) is a prerequisite for Gen Chem (Chem 5 and 6). With more advanced background (AP IB) one might exempt out of one or both (Chem 5 or 6); however, one must still take a Gen Chem class at the college level. Chem 11 is an alternate course for students with advanced standing providing credit for Chem 5 and 11. Organic Chem: Chem 51 and 52. For students with more advanced knowledge or intend to major in chemistry, the Chem 57 and 58 sequence is typical. Students with little or no chemistry background should strongly consider doing chemistry prep the summer before arriving at Dartmouth or summer after their first year.

**SUBJECT:** Biochemistry - 1 course. AT DARTMOUTH: Bio 40 or Chemistry 41. Either course require Organic Chem as a prerequisite. Bio 40 requires Biology 12 as a prerequisite.

**SUBJECT:** Physics (PHYS) - 2 courses of general Physics with lab. AT DARTMOUTH: Physics 3 and 4 These courses have a Math 3 prerequisite. Physics 13 and 14 is the sequence for Chemistry, Engineering, or Physics majors, requiring Math 8. With a more advanced background (AP IB) one might exempt out of one or both classes or be invited to Honors 15/16 (it’s your choice to take or not). However, one should still take a general Physics class at the college level.

**SUBJECT:** Mathematics (MATH) - 1 term of Calculus and 1 term of Statistics. AT DARTMOUTH: Calculus: Math 3 or equivalent, Introduction to Calculus, is a prerequisite to several courses in Chemistry or Physics. For purposes of pre-health requirements at this time, the equivalent of Math 3 (via exemption, or Math 1 and 3) is sufficient as long as one Math class (which can be Statistics) is taken at the college level. Statistics: Any Statistics course numbered 10 in Psychology, Sociology, Economics, Government, or Mathematics; Biology 29 (Biostatistics); and Social Sciences 15 (Intro to Data Analysis).

**OTHER COURSES FOR MCAT PREPARATION:** Psychology and Sociology: While these are not yet prerequisites for most health professions schools, one or both is highly recommended; regardless, knowing the material will be necessary for the MCAT. If you choose to prepare at Dartmouth, Psych 1 gives you much of the Psychology material you need and Sociology 1 or a health related Sociology course could give you the sociology material you need. Consult with your pre-health advisors; there may be other ways to learn this material at Dartmouth or on your own.
## Language Requirement (Effective for the Class of 2026)

### Previous Language Experience

<table>
<thead>
<tr>
<th>BIG GREEN PATH</th>
<th>Options for Satisfying the Requirement</th>
</tr>
</thead>
</table>
| Has not demonstrated competency equivalent to one year’s study at Dartmouth (e.g. student has not received “EX” from the third course in a language, such as SPAN 3) | Complete Dartmouth language courses numbered 1, 2, and 3 (depending on placement)  
**OR**  
Complete a Language Study Abroad (LSA) program |

<table>
<thead>
<tr>
<th>BEIMA PATH</th>
<th></th>
</tr>
</thead>
</table>
| Has demonstrated competency equivalent to one year’s study at Dartmouth (e.g. student has received “EX” from the third course in a language, such as SPAN 3) | Complete a more advanced Dartmouth course in the language in which competency was demonstrated (e.g. SPAN 9)  
**OR**  
Complete Dartmouth courses numbered 1 and 2 in a different language from the one in which competency was demonstrated (e.g. ITAL 1 and 2).  
**OR**  
Complete an accelerated beginner Dartmouth course (e.g. FREN 11) in a different language from the one in which competency was demonstrated.  
**OR**  
Complete a Language Study Abroad (LSA) in a different language from the one in which competency was demonstrated. |

<table>
<thead>
<tr>
<th>LONE PINE PATH</th>
<th></th>
</tr>
</thead>
</table>
| Has demonstrated competency equivalent to one year’s study in a language not taught at Dartmouth (e.g. student has demonstrated significant ability in Korean) | Complete a Language Requirement for Proficient Speakers (LRP) course, which addresses the purpose of the Language Requirement for proficient speakers of a language other than English.  
**OR**  
Complete Dartmouth courses numbered 1 and 2 in a different language from the one in which competency was demonstrated (e.g. HEBR 1 and 2).  
**OR**  
Complete an accelerated beginner Dartmouth course (e.g. FREN 11) in a different language from the one in which competency was demonstrated.  
**OR**  
Complete a Language Study Abroad (LSA) in a different language from the one in which competency was demonstrated. |

We intentionally chose these questions and prompts to inspire you to reflect on your intentions, and prepare for the transition from high school and secondary school to Dartmouth.

Use this worksheet as a starting point and refer back to it often! Bring your EXPLORE, ENGAGE, EXCEL and the completed worksheet to meetings with your Undergraduate Dean, your Faculty Advisor, other mentors, and peer advisors.

The primary purpose of Dartmouth Generated Placement Exams is to ensure that you are taking courses appropriate to your level of preparation. It is strongly recommended that you take them when there is a question of placement or if you are wondering where to begin with a particular academic sequence.

**DARTMOUTH GENERATED PLACEMENT EXAMS YOU PLAN TO TAKE:**

---

**WHAT MAKES YOU UNCERTAIN ABOUT ACADEMIC SUCCESS?**

---

**WHAT WILL HELP YOU SUCCEED ACADEMICALLY AT DARTMOUTH?**

---

**WHEN THINKING ABOUT THE ADJUSTMENTS NEEDED** to transition from high school to college learning, it helps to consider what skills you bring with you, and the areas in which you might need additional support.

---

**USING THIS GUIDE, LIST THE COURSES THAT INTRIGUE YOU.**

---
CONSIDER THESE THINGS WHEN CHOOSING COURSES FOR YOUR FIRST YEAR:

1) Take classes that EXPLORE academic interests (leave room for new, old, and unrealized opportunities of academic connection).

2) Distributive Requirements: We encourage you to choose distributive requirements with purpose and clear goals. We discourage you from choosing a class that just “checks off” a distributive requirement. These requirements are NOT intended to be completed in the first two years or prior to beginning a major.

3) First-Year Writing Requirement: Be sure to allow space for these required courses during your first year. For details, see pages four and five of this publication and https://writing-speech.dartmouth.edu/curriculum/placement-and-enrollment-policies.

4) The Language Requirement: When to start? Will you complete it using the Big Green path, the Bema path or the Lone Pine Path? Are you thinking about a Language Study Abroad program (LSA/LSA+)?

5) Pay attention to course sequencing and plan for prerequisite courses—especially for pre-health requirements, an off-campus program, or a potential major.

6) Remember: You do not need to take a course just because you were placed into the course.

WHAT ACADEMIC AND CO-CURRICULAR OPPORTUNITIES EXCITE YOU AS YOU IMAGINE YOUR FIRST YEAR AT DARTMOUTH?

Make sure to consider a broad range of co-curricular opportunities, classes, clubs, campus jobs, getting to know faculty, and skills to develop.

POTENTIAL FIRST-YEAR COURSES

<table>
<thead>

The following timeline includes tasks for you to accomplish, as well as suggestions for reflection. Each term and the breaks between them provide new opportunities for self-exploration that will facilitate your understanding of the meaning and purpose of a liberal arts education while fostering your intellectual and personal development toward academic success and lifelong learning. ENGAGE with purpose and intention!

**FALL TERM**
- Be patient and generous with yourself as you transition to Dartmouth. The transition can last all year long, and even longer for some individuals.
- Strive for balance and intentionality in co-curricular exploration. You can’t do everything, so make sure to recognize the old things that make you feel good and the new things that make you happy.
- During this term, you are expected to continue exploring courses and departments, in support of course election.
- Embrace challenges and see them as opportunities for growth—they require you to tap deeper into your motivations, learn to manage your time better, develop new study skills and behaviors, and to not give up.
- Pay attention to your health and well-being. Access Wellness resources and establish healthy sleep habits.
- Get to know your faculty and communicate with them regularly. This will help you identify recommenders for future opportunities.

**WINTER TERM**
- This is an opportunity to focus on improving your performance based on Fall term grades and tap into additional academic resources.
- Explore study abroad opportunities and apply by the deadline.
- Once you’re notified about your off-campus program, adjust spring term course election if necessary.
- Stay healthy.
- Winter term can be tough; your ongoing transition to Dartmouth, adjusting to the intensity of the term schedule, and environmental factors might prove challenging. Seek support from the Student Wellness Center and other campus resources.
- Use your advising network as you consider D-Plan possibilities.

**WINTER BREAK**
- Make sure you actually take a BREAK.
- Reflect on the full experience of your first term.
- Use your grades to help you examine your goals.
- Discuss your first-term experience with family and supporters.
- Begin to explore D-Plan options, based on emails from your Undergraduate Dean.
- Now that you know how quickly terms move at Dartmouth—and have discovered more about yourself as a learner—think about course adjustments to balance your workload.

**MARCH BREAK**
- Take a real BREAK. This pause between terms goes very quickly and it’s important to give yourself some space to gather energy for Spring term.
- Reflect on both terms and use your grades to help you examine your goals.
- Share your experiences with family and supporters.
- Clarify your D-Plan thinking. Get ready to submit D-Plan choices in early Spring term.
- Begin thinking about Leave Term funding options and opportunities and discuss those with your advising network. Explore opportunities and begin applications.
- Now that you know how quickly terms move at Dartmouth—and have discovered more about yourself as a learner—think about course adjustments to balance your workload.
The following timeline includes tasks for you to accomplish, as well as suggestions for reflection. Each term and the breaks between them provide new opportunities for self-exploration that will facilitate your understanding of the meaning and purpose of a liberal arts education while fostering your intellectual and personal development toward academic success and lifelong learning. Engage with purpose and intention!

**SPRING TERM**

- Submit your D-Plan choices in early April.
- Begin to explore ideas about possible majors and minors with your Faculty Advisor, Undergraduate Dean, and upper-level student mentors.
- Assess faculty connections for mentorship opportunities. Take a faculty member to lunch if you haven’t already utilized that program.
- You will elect Fall term courses during this term which will provide opportunities to start thinking about sequencing for possible majors or minors.
- What have you discovered about your extracurricular passions and joys? What will next year hold?
- Explore your summer options but know that EVERYONE does something different—as with all things, there is no ONE Dartmouth summer experience! Please note: there is no expectation that your summer experience should be pre-professional.

**EVERY TERM**

- Make your course changes, as necessary.
- Cultivating your advising relationships is an ongoing process. These relationships support goal setting.
- Reflect and re-set goals by applying a critical eye to what you’ve learned and developed through hard work and dedication, recognizing that you can evolve. Engage with your Faculty Advisor, Undergraduate Dean, and upper-level student mentors around these areas of exploration.
- Take an active role in learning and remain open to feedback and change.
- Continue exploring learning strategies and academic resources.
- Your grades will serve both as a metric for how you performed and an evaluation of which learning strategies worked.

**SUMMER TERM**

- "Map" your major(s)! Look ahead at major requirements in order to be ready for course election and the major planning process that will begin in Winter term of sophomore year.
- If you have multiple major interests, identify course options for Fall term that will help you distill your choices into concrete plans.
- Reflect on your first year at Dartmouth. Celebrate your successes and explore opportunities for growth. Identify potential changes in habits or practices that will allow you to better reach your personal and academic goals and solidify the approaches that made you successful.
- Take advantage of the time away from Dartmouth. Throw yourself into a summer job or pastime, whether scooping ice cream, lifeguarding, or interning at a local nonprofit. Regardless of where and what—recognize your accomplishments.

**SPOT TO JOT**

- Reflection and Goals
